#### **Definitions of New and Current Mission**

New Mission Projects--New mission projects all support new and additional programs or initiatives that do not revitalize the existing physical plant. These projects support the deployment and beddown of new weapons systems; new or additional aircraft, missile and space projects; and new equipment, i.e., radar, communication, computer satellite tracking and electronic security. Planning and Design and Unspecified Minor Constructions are also included in this category.

<u>Current Mission Projects</u>--These projects revitalize the existing facility plant by replacing or upgrading existing facilities and alleviating long standing deficiencies not generated by new missions or equipment. Included are projects to improve the quality of life, upgrade the workplace, enhance productivity and achieve compliance with environmental, health and safety standards.

#### Department Of The Air Force Military Construction Program Fiscal Year 2001

#### **Economic Considerations**

An economic evaluation has been accomplished for all projects costing over \$2 million and the results are addressed in the individual DD Forms 1391.

#### Design For Accessibility Of Physically Handicapped Personnel

In accordance with Public Law, 90-480, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

#### **Environmental Statement**

In accordance with Section 102(2) (c) of the National Environmental Policy Act of 1969 (PL 91-190), the environmental impact analysis process (EIAP) has been completed or is actively underway for all projects in the Air Force FY 2001 Military Construction Program.

#### **Evaluation Of Flood Plains And Wetlands**

All projects in the program have been evaluated for compliance with Executive Orders 11988, Flood Plain Management, and 11990, Protection of Wetlands, and the Flood Plain Management Guidelines of U.S. Water Resources Council. Projects have been sited to avoid or reduce the risk of flood loss, minimize the impact of floods on human safety, health and welfare, preserve and enhance the natural and beneficial values of wetlands and minimize the destruction, loss or degradation of wetlands.

#### **Environmental Compliance**

The FY 2001 MILCON request includes \$17.3 million for requirements necessary to correct current environmental noncompliance situations and to prevent future noncompliance. The environmental compliance target areas for this program include live fire training facilities, hazardous material storage facilities, water distribution systems, water treatment facilities, and generator fuel storage tanks.

#### FY 2001

#### Congressional Reporting Requirements

#### 1. Statements On NATO Eligibility

These are in response to the requirement in the FY 1988 Senate Appropriations Committee Report, 100-200, page 14, and are included in the appropriate project justification.

#### 2. Statements On Compliance With Construction Manual 4210.1m

These are in response to the requirement in the FY 1988 Senate Appropriations Conference Report, 100-498, page 1003, and are included in each project justification.

#### 3. New And Current Mission Activities

The FY 1989 Senate Appropriations Committee Report, 100-380, pages 10 and 11, identified a requirement to include an exhibit in the budget justification books that displayed required projects in two separate categories: New Mission and Current Mission. The CM (current mission) or NM (new mission) designation which follows the project on the listing at page 13 identifies each project as new or current mission. Additionally, each justification in Block 11 of the DD Form 1391 indicates whether the project supports a new or current mission.

#### 4. Resolution Trust Corporation Assets

The FY 1991 Senate Armed Services Committee Report, 101-384, requested the Department to screen Resolution Trust Corporation assets to determine if proposed construction projects could be more economically met through the purchase of existing assets held by the Resolution Trust Corporation. The FY 2001 Military Construction program was compared to the current real estate asset inventory published by the Resolution Trust Corporation. It was determined, and the Department certified, that no assets exist that can be economically used in lieu of the FY 2001 projects requested.

#### 5. Real Property Maintenance

The FY 1997 House Appropriations Committee Report, 104-591, page 11, requested the Department to provide the real property maintenance backlog at all installations for which there is a requested construction project. Each DD Form 1390 reflects this information in block 12. In addition, the report requested all troop housing requests to show all real property maintenance conducted in the past two years and all future requirements for unaccompanied housing at that installation. Each DD Form 1391 for troop housing reflects this information in block 11.

#### 6. Metric Conversion

The FY 1999 House Appropriation Committee Report, 105578, page 11, requested the Department to ensure that any DD Form 1390/1391, which is presented as justification in metric measurement, shall include parenthetically the English measurement. Each DD Form 1391 reflects the metric and English equivalent in block 11.

#### FY 2001

#### Non-Milton Funding

Research and Development (RDT&E)

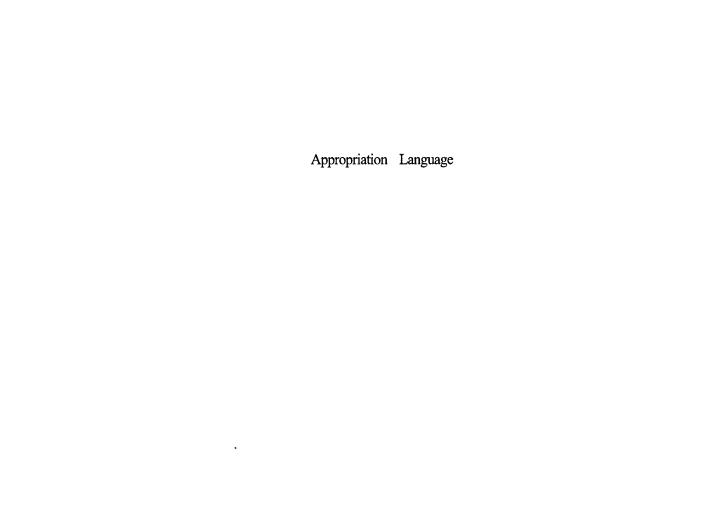

None

#### FY 2001

#### Third Party Financing

Test of long-term facilities contracts

None

#### Appropriations Language

#### Military Construction, Air Force

For acquisition, construction, installation, and equipment of temporary or permanent public works, military installations, facilities, and real property of the Air Force as currently authorized by law \$530,969,000 to remain available until September 30, 2004: Provided that, of this amount, not to exceed \$54,237,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reasons therefore.

10. Description of Proposed Construction: A two-story academic facility constructed with reinforced concrete foundation and floor slab, structural steel frame, masonry walls, sloped architecturally compatible roof, fire protection, utilities and necessary support. Building will include 14 seminar instruction rooms, command and academic offices, student processing and support areas.

Air Conditioning: 200 KW.

11. REQUIREMENT: 8,440 SM ADEQUATE: 5,740 SM SUBSTANDARD: 0

PROJECT: Construct an officer training school (OTS) academic facility.

(New Mission)

REQUIREMENT: This facility is required to conduct officer training in accordance with OTS curriculum and to produce the required number of trained officers. OTS's primary mission is Basic Officer Training (BOT) and Commissioned Officer Training (COT). BOT trains cadet officer candidates for commissions as line officers. The COT program trains newly commissioned lawyers, chaplains, medical professionals and other non-line officers.

CURRENT SITUATION: OTS currently utilizes facilities at two locations, separated by over 10 miles, to conduct academic activities. OTS uses a portion of the Squadron Officer School (SOS) academic facility and a portion of the Senior NCO Academy (SNCOA) academic facility at the Gunter Annex. The SOS and SNCOA facilities are not large enough to support the increase in OTS production. A controlled environment is necessary to effectively train OTS cadets. This is achieved by limiting inappropriate external influences that undermine training. OTS students commingle with SOS and SNCOA students and as a result, the controlled environment is

	OTS ACADEMIC F.	ACILITY				PNC	280231	.34
Ī								

compromised. Additionally, the loss of key facilities by both SOS and the SNCOA affects their respective curriculum and flexibility to respond to their increasing requirements.

IMPACT IF NOT PROVIDED: OTS will not have sufficient academic space resulting in a potential shortfall of qualified Air Force officers. OTS will continue to operate in an inefficient manner, affecting quality of training and the other schools' training mission.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Hanbook 32-1084, "Facility Requirements." A preliminary analysis of reasonable options (renovation, leasing, new construction) for accomplishing this project indicates that only new construction will satisfy operational requirements. Because of this, a full economic analysis was not needed or performed. A certificate of exception has been prepared. Base Civil Engineer: Lt Col Wilfred Cassidy, (334) 953-6945. Academic Addition: 2,700SM = 29,052 SF

|10. Description of Proposed Construction: Install eight 145KL diesel | fuel storage tanks with new double-wall pipes. Clean, dismantle, and | remove one 2,275KL storage tank and 244LM of existing pipes. Includes all | necessary support.

| 11. REQUIREMENT: 1,160 KL ADEQUATE: 0 SUBSTANDARD: 2,275 KL | PROJECT: Construct generator fuel storage. (Current Mission) | REQUIREMENT: This is a Level I environmental compliance requirement. | Adequate storage tanks must have leak detection, cathodic protection, liner, overfill protection, and secondary containment. Total fuel | quantity must be adequate for an entire year of operation without | resupply.

CURRENT SITUATION: Cape Romanzof is a remote radar site and a key part of the North Atlantic Air Defense Command (NORAD) air defense network. All electrical power for the site is produced by diesel generators. Fuel can only be brought in by barge from May to September. The single existing storage tank was constructed in 1952, and does not have leak detection, cathodic protection, liner, nor overfill protection. The tank is beyond its useful life and does not comply with Alaska regulations. Should the single-tank fuel system fail, all power to the site will be lost.

IMPACT IF NOT PROVIDED: The Air Force will continue to be exposed to sanctions by state regulators. The potential failure of the single-tank fuel supply system risks a costly resupply by air, or evacuation of the site, with loss of radar coverage.

| ADDITIONAL: This project meets the scope/criteria of Air Force Handbook | 32-1084, "Facility Requirements." All reasonable alternatives were | considered in development of this project. Only one option meets the | operational and regulatory requirements. Therefore, a full economic

10. Description of Proposed Construction: A three-story facility with reinforced concrete foundation and floor slabs, masonry walls and roof. Includes room-bath/kitchen-room modules, laundries, storage and lounge area and all supporting facilities.

| Grade Mix: 144 E1-E4.

11. REQUIREMENT: 1,455 RM ADEQUATE: 938 RM SUBSTANDARD: 0
PROJECT: Construct a dormitory. (Current Mission)

REQUIREMENT: A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. This project is in accordance with the Air Force Dormitory Master Plan.

CURRENT SITUATION: As verified by the Air Force Dormitory Master Plan, the base has insufficient facilities to adequately accommodate permanent party unaccompanied enlisted personnel required to live on-base per Air Force policy.

IMPACT IF NOT PROVIDED: Adequate living quarters will continue to be unavailable resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. Low morale will contribute to retention difficulties for the Air Force.

ADDITIONAL: This project meets the criteria/scope in the new uniform barracks construction standard, known as "one plus one," established by OSD. All known alternatives were considered during development of this project. No other option could meet mission requirements, therefore no

Replace electrical wiring, lighting, heating system, water supply line, and exterior doors. Install fire protection systems. Upgrade hangar doors. Install new gas line and boilers throughout. Includes soil remediation and all necessary support. 11. REQUIREMENT: 48,417 SM ADEQUATE: 6,201 SM SUBSTANDARD: 32,508 SM PROJECT: Upgrade hangar complex. (Current Mission) REQUIREMENT: Upgrade hangar to meet current electrical codes, provide a fire suppression system meeting current life safety code, and a new, energy-efficient heating system which supports the base-wide conversion to gas heating. CURRENT SITUATION: The existing hangar was constructed in 1942. Functions housed in this facility include aircraft maintenance, squadron operations, maintenance shops, and administrative areas. The hangar has no fire suppression system, and the existing fire detection system is

outdated. The electrical system does not meet current standards, the roof leaks and has no insulation, and the floor is cracked, causing a foreign object damage hazard. The existing water supply line cannot support a fire suppression system. The existing steam heating system is over 40

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." A preliminary analysis of options for meeting this requirement has been completed. Only one option

| IMPACT IF NOT PROVIDED: The lack of a fire suppression system will | continue to expose approximately 200 personnel and 11 fighter aircraft to | the risk of loss by fire. Roof leaks, foreign object damage, and high | energy consumption will continue to jeopardize mission capability.

years old and will be replaced by natural gas heat.

- 10. Description of Proposed Construction: Two-story facility consisting of concrete footings, stem walls, and floor slab; concrete masonry walls, pitched metal roof, insulation, heating and air conditioning, all support utilities, fire detection and protection, restrooms, equipment and locker rooms, laundry, steam/sauna rooms, suspended track, handball/racquetball courts, parking, sidewalks, and landscaping.

  | Air Conditioning: 528 KW.
- 11. REQUIREMENT: 7,804 SM ADEQUATE: 2,601 SM SUBSTANDARD: 0 PROJECT: Construct Fitness center. (Current Mission). REQUIREMENT: Fitness facilities are required to provide fitness, wellness, and aerobic areas for military, dependent and retired members. Adequate space is required for basketball/volleyball courts, racquetball courts, aerobic training areas, and physical conditioning space. CURRENT SITUATION: The existing base gymnasium was built in 1968 and is no longer large enough to meet mission requirements. Steady increases in the base population have overloaded the current facility. A shortage of racquetball courts, aerobics training areas, and physical conditioning space forces patrons to stand in line and in many instances be turned away as the gym courts or aerobics room are full. There is a severe shortage of general physical conditioning space and equipment. IMPACT IF NOT PROVIDED: The base fitness center will continue to be overcrowded and unavailable to large numbers of potential users. The situation will continue to have an unfavorable impact on morale and on the physical condition of military personnel who are required to maintain standards of weight and physical condition. ADDITIONAL: This project meets the criteria/scope specified in Air Force

| 10. Description of Proposed Construction: Construct a one story facility | with concrete foundation, masonry walls, structural steel frame, sloping | roof system, and fire protection system, utilities and necessary support. | Demolish seven facilities (3,450 SM). | Air Conditioning: 703 KW.

11. REQUIREMENT: As required.

<u>PROJECT</u>: Construct a C-130 squadron operations/aircraft maintenance unit (Sq Ops/AMU) facility. (Current Mission)

REQUIREMENT: This project is required to consolidate Air Mobility operational squadrons by collocating aircraft operators with aircraft maintainers. The consolidation relocates flyers and maintainers out of undersized and dispersed facilities into a functional and adequately sized structure to support 16 C-130 aircraft assigned to Little Rock AFB. The facility will support Sq Ops/AMU management support, briefing/debriefing flight planning, training and testing, flying/ground safety, tool rooms, bench stock, mobility office, technical order library, life support, standardization/evaluation, locker rooms, and scheduling. Project includes constructing a headquarters facility to replace the current facility which is in the way of construction.

CURRENT SITUATION: Squadron operations and the aircraft maintenance units are dispersed among seven facilities. This physical separation creates fragmented lines of communication and authority. Aircrews and maintenance personnel must spend many hours away from their duty location in an effort to obtain parts, organizational and mobility equipment, and required training. The existing maintenance facilities were originally constructed in the mid 1950s. These facilities are inadequately sized and not

10. Description of Proposed Construction: Reinforced concrete foundation and slab, sloped roof, and steel frame support with masonry exterior. Project includes HVAC, fire protection, utilities, and all necessary support. Functional areas include courts, indoor track, aerobic and weight rooms and administrative areas. Project includes demolition of one facility (2630 SM).

Air Conditioning: 200 KW.

11. REQUIREMENT: 5,854 SM ADEQUATE: 0 SUBSTANDARD: 2,650 SM PROJECT: Construct a physical fitness center to include Health and Wellness Center (Current Mission).

REQUIREMENT: An adequate facility to conduct comprehensive and balanced programs for recreational sports, athletic training, and physical fitness is needed as an essential feature of the living and working environment of personnel on the Air Force base. Programs to be supported include aerobic, health, and nutritional training and recreational athletic programs.

CURRENT SITUATION: The existing facility is not large enough to accommodate base personnel, especially females interested in participating in exercise/recreational programs. The gymnasium does not provide the required space to support the demand for basketball, volleyball, racquetball, weightlifting, wrestling, judo, karate, and other indoor recreational activities. The lack of adequate court and instructional class areas cause most programs to be restrictive in numbers and some programs cannot even be offered. The overall space limitation is discouraging and has a detrimental effect on the athletic program, which is the most important MWR program on Little Rock AFB. The current

4. PROJECT TITLE	5. PROJECT NUMBER
FITNESS CENTER	NKAK903003

mandatory aerobic testing is conducted in an overcrowded office area that does not maintain the required temperature level. The weight room is squeezed into a small area and is not conducive to proper conditioning work or safety. Due to numerous additions to the existing facility functional layout and access are poor and utilities are undersized for current loads.

IMPACT IF NOT PROVIDED: The physical conditioning environment will continue to be overcrowded and unsafe. Proper training and conditioning of personnel will not be met. Because there is a lack of nearby fitness centers, personnel will lose significant time and money commuting and paying dues to private alternative facilities. Without benefit of this quality-of-life initiative the Air Force will be hampered in its ability to attract and retain quality personnel.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." A preliminary analysis of reasonable options for accomplishing this project was done. It indicates that new construction is the only option that will meet operational requirements. Because of this a full economic analysis was not performed. BCE: Lt Col Drew Jeter, 501-987-3322. Fitness Center: 5854SM = 62,989SF

- |10. Description of Proposed Construction: Construct a water treatment | plant to comply with the safe drinking water standards regarding manganese | and iron. Construct a new 1,800 meter distribution line to the existing | 11.4 million liter storage tank. Demolish existing water treatment plant.
- 11. REQUIREMENT: As required.

| PROJECT: Construct a water treatment plant and distribution line. | (Current Mission)

REQUIREMENT: This is a Level I environmental compliance requirement.
Beale AFB has received five notices of violation (NOVs) for Total Coliform Rule (TCR) violations and is out of compliance with Article 16, Section 64449 of the California Code of Regulations (CCR Article 16) for exceeding the secondary standard Maximum Contaminant Level (MCL) for manganese (Mn). This project will remove manganese and iron and lower the associated chlorine demand, reduce the water residence time, eliminate TCR NOVs and allow Beale to comply with CCR Article 16.

CURRENT SITUATION: To minimize residence time in the water distribution system and maintain chlorine residuals, the base flushes over 27,000 gallons/day of treated water from open fire hydrants into the storm sewers. This practice is wasteful and the base still receives NOVs for TCR violations. The base received one NOV within a 12 month period; four NOVs results in a monetary fine NOV and placement on the EPA Non-Compliance list. Mn levels average out of compliance with CCR Article 16. High Mn levels exert a high chlorine demand and cause brown-colored, staining water when treated with chlorine. Beale AFB currently adds a polymer to keep the Mn and Fe in solution in the distribution system. However, it is expensive (\$50,000/year) and does not maintain compliance with the standard. This project also brings Beale AFB into compliance

with CCR Article 16 and eliminates the need for polymer addition, stops wasteful discharge of treated water, and complies with backflow prevention standards.

IMPACT IF NOT PROVIDED: Long residence times will continue to result in reduced chlorine residuals, positive coliform results, and NOVs for violating the TCR. There is a high probability Beale AFB will receive a monetary NOV and be placed on the EPA Non-Compliance list. The base will continue to be out of compliance with CCR Article 16.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exception has been prepared. Base Civil Engineer: Lt Col Kevin Rumsey, (916) 634-2942. Transmission line: 1800LM = 5904LF

SUBTOTAL 6,213
TOTAL CONTRACT COST 6,213
SUPERVISION, INSPECTION AND OVERHEAD (5.7%)
TOTAL REQUEST 6,567
TOTAL REQUEST (ROUNDED) 6,580

Description of Proposed Construction: Concrete foundation/slab, masonry walls, standing-seam pitched metal roof, utilities, landscaping, and all other necessary support. Includes multi-purpose ball court, racquet ball courts, weight rooms, rest rooms, lap pool, sauna, jacuzzi, exercise and training space, and wellness center. Demolish two facilities (1,850 SM).

Air Conditioning: 350 KW.

REQUIREMENT: 2,800 SM ADEQUATE: 0 SUBSTANDARD: 1,850 SM PROJECT: Fitness center. (Current Mission)

REQUIREMENT: An adequate facility is required for the physical fitness of military personnel to support combat readiness and national emergencies and promote healthier lifestyles for military personnel and their families. Functional fitness centers improve quality of life by enhancing readiness, promoting good health, and providing recreation to help moderate the stresses of military life. Physical well-being and good morale, in part from exercise, team, and individual sports, contribute to developing the self-confidence and physical strength required during contingencies.

CURRENT SITUATION: The existing inadequate facilities were converted to physical fitness centers on a piecemeal basis. The facilities are not configured to accommodate the physical exercise activities of the base population of over 1,950 military personnel and 2,687 dependents. Many people are turned away and the number of athletic programs are limited, despite optimum scheduling and the use of waiting lists. Due to the high cost of living in Los Angeles, access to private athletic facilities is not economically available to most assigned personnel.

AIR FORCE (computer generated)	
3. INSTALLATION AND LOCATION	
LOS ANGELES AIR FORCE BASE, CALIFORNIA	
4. PROJECT TITLE	5. PROJECT NUMBER
FITNESS CENTER	ACJP933005

IMPACT IF NOT PROVIDED: Facility shortcomings will continue to hamper physical conditioning and recreational programs, with negative impact on physical fitness and morale. Military personnel will have limited access to a physical fitness facility to maintain Air Force physical fitness standards required to support combat readiness and national emgergencies.

ADDITIONAL: This project meets the criteria/scope specified in the Air Force Handbook 32-1084, "Facility Requirements." An economic analysis has been prepared comparing the alternatives of new construction, revitalization, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Base Civil Engineer: Lt Col William Saunders, (310) 363-0287. Fitness Center: 2,800SM = 30,128SF.

- 10. Description of Proposed Construction: Upgrade water supply and distribution lines in the main cantonment area of Vandenberg AFB.

  Includes all necessary pipelines, valves, backflow devices, blow-off and air release valves, fire hydrants, cathodic protection, appurtenances, and associated road repairs. Abandon existing system in place as necessary.
- | 11. REQUIREMENT: As required.

PROJECT: Upgrade water distribution system. (Current Mission)
REQUIREMENT: This is a Level 1 Environmental Compliance requirement.
Vandenberg AFB does not meet CA Title 22, Sections 64654 and 64656 of
California's safe drinking water act. Title 22 mandates that the maximum contaminant level must be less than one positive sample per every 40 samples in public water systems. Additionally, a detectable disinfectant residual of 0.2 milligrams per liter must be maintained throughout 95 percent of the system.

CURRENT SITUATION: The water distribution system in the main cantonment larea of the base was originally constructed in 1943. Since then, over 80 percent of the WWII facilities have been demolished, but the water system serving these sites remains largely active but unused causing stagnation. The network of randomly capped, abandoned and underutilized water supply lines provide recesses within the system where drinking water stagnates. This stagnation leads to loss of disinfectant residual and violates CA Title 22. Lack of disinfectant has led to bacteria growth exceeding the state bacteriological standards of 0.2 mg/l. Degradation of chloramine disinfectant during stagnation releases nutrients that certain types of bacteria thrive on, further violating CCR Title 22. Multiple line breaks in 1996 and 1997 resulted in positive bacteriological samples that led to a notice of violation (NOV) in 1997.

- 10. Description of Proposed Construction: New underground diverse routing of primary and backup 4160 volt power feeds complete with dual 2500KVA transformers and dual redundant switchgear. Reprogram existing generator control system and switchgear to allow for independent power feeds. This work includes all cabling, connections, conduit, system testing, and other associated work to provide complete power feed.
- 11. REQUIREMENT: As required.

PROJECT: Space based infrared system (SBIRS) power connection. (New Mission)

REQUIREMENT: This project directly supports the Space Based Infrared System (SBIRS), an Air Force core modernization program. It provides for reliable primary and emergency backup power for the Mission Control Station in support of the SBIRS program. The Mission Control Station provides central processing functions for tactical and strategic space-based early warning battlespace characterization and technical intelligence gathering requirements. Backup power is required to limit downtime to five and one half minutes per year (99.999% availability) for mission critical utility loads. This new power connection is required to obtain the required power availability.

CURRENT SITUATION: SBIRS will replace the Defense Support Program (DSP); however, the existing DSP power plant on site is not capable of supporting both the new and existing missions at the same time due to generator and main switchgear limitations. A Memorandum of Agreement is in place that allows both the commercial and backup power requirements to be supplied via a temporary connection to the Aerospace Data Facility power plant. This connection must be upgraded because the temporary connection is rated for 1.5 Megawatts while the SBIRS Mission Control Station requires a 2.5

SPACE BASED	INFRARED SYSTEM POWER CONNECTION		CRWU013002

Megawatt connection for full mission capability to be realized.

| IMPACT IF NOT PROVIDED: The SBIRS Mission Control Station will have no commercial or backup power beyond the five year limitation imposed by the lacrospace Data Facility. Even if the Memoradum of Agreement with the lacrospace Data Facility is extended, the temporary feeder cannot provide sufficient power for full mission capability of the SBIRS Mission Control Station.

ADDITIONAL: There is no criteria/scope for this project in Air Force Handbook 32-1084, "Facility Requirements". All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exception has been prepared. Base Civil Engineer: Lt Col James Mills, (719)556-7631. Primary Underground Distribution Line: 742 LM = 2,434 LF.

- | 10. Description of Proposed Construction: Three story, concrete | foundation/floor slabs, masonry walls, standing seam metal roof. Includes | room-bath-room modules with common kitchen and dining area, laundries, | storage, lounge areas, mailroom, supporting facilities, and minimum | antiterorism/ force protection measures. Site constraints require | relocation of 4 tennis/basketball courts and rerouting of utility lines. | Air Conditioning: 450 KW.
- 11. REQUIREMENT: 1,207 RM ADEQUATE: 378 RM SUBSTANDARD: 204 RM PROJECT: Construct a dormitory. (Current Mission)

  REQUIREMENT: A major Air Force objective provides unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. The retention of these highly trained airmen is essential to our readiness posture and continuing world-wide presence. Peterson AFB supports both Cheyenne Mountain AFS and Schriever AFB with unaccompanied enlisted housing.

CURRENT SITUATION: The base has insufficient on-base housing to accommodate the unaccompanied enlisted personnel. This project is in accordance with the Air Force Dormitory Master Plan.

IMPACT IF NOT PROVIDED: Adequate living quarters which provide a level of privacy required for today's airmen will not be available, resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel.

ADDITIONAL: This project meets the criteria/scope specified in the new

10. Description of Proposed Construction: Single story facility with concrete foundation, reinforced concrete slab on grade floor, masonry walls with brick veneer, standing seam metal roof. Includes Sensitive Compartmentalized Information Facility (SCIF) area, secure vault, entry control point, fire protection, force protection measures, communications, sitework, and all other support.

Air Conditioning: 30 KW.

11. REQUIREMENT: 950 SM ADEQUATE: 0 SUBSTANDARD: 515 SM

PROJECT: Construct an operations support facility. (Current Mission)

REQUIREMENT: An adequate, energy efficient, properly configured, secure facility is required to house 50 personnel from the 544th Intelligence

Group (IG). A SCIF and support space is needed for operation and maintenance functions, communication centers, security measures, and support functions for Air Intelligence Agency operations. Increased space requirements resulted from expanded mission responsilities with 14th Air Force and 21st Space Wing, and growth of space units under the control of the 544 IG.

CURRENT SITUATION: The 544th Intelligence Group occupies 515 SM of the first floor of Building 845, the 21st Space Wing Headquarters Facility. At their current manning level of 35 personnel, the 544 IG uses all the available space in this building. There are 27 people working in support space and 8 people working in a secure vault. There is no more room for the additional personnel which require both SCIF and support space for the group's operations. In addition, there is no more SCIF space available on Peterson AFB.

IMPACT IF NOT PROVIDED: The 544 IG will be forced to disperse additional

personnel to other facilities on base, adversely affecting command and control and decreasing unit productivity. The 544 IG SCIF operations will be forced to be conducted in approximately 1/2 the actual secure space required for effective operations. Inadequate SCIF and support space will prevent the 544 IG from effectively performing its mission.

| ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." A preliminary analysis of reasonable options for accomplishing this project (status quo, building expansion, new construction, finding alternative space, and leasing) has been accomplished. Results of this analysis indicate only one option, new construction, will meet all operational requirements. Accordingly, a full economic analysis was not performed. A Certificate of Exception has been prepared. Base Civil Engineer: Lt Col James Mills (719) 556-7631.

- 10. Description of Proposed Construction: Reinforced concrete foundation and floor slab. Steel framed structure with roofing system and exterior finish that matches the existing facility. Elevator, utilities, fire supression, parking, and all necessary support are included. Provide minimum antiterrorism/force protection measures. Demolish remaining Government owned modular facilities (5,670 SM).

  Air Conditioning: 370 KW.
- 11. REQUIREMENT: 14,775 SM ADEQUATE: 10,325 SM SUBSTANDARD: 4,450 SM PROJECT: Construct an addition to the Operational Support Facility. (Current Mission)

REQUIREMENT: Permanent, adequately sized work space is required for supporting Air Force satellite operations. To meet mission growth requirements, support space must be constructed to free-up operational space in expensive technical facilities. Specifically, this project will provide space for the Contracting function which oversees mission critical contracts supporting the Air Force Satellite Control Network (AFSCN), the Space Warfare Center, the Cheyenne Mountain Training System, five solar observatories, and remote site integration. This project also provides a permanent facility for Detatchment 11, Space and Missile Systems Center to provide on-site integrated engineering services to support Air Force satellite systems, the Space Warfare Center, the Defense Support Program (DSP), the Global Positioning System (GPS), and the MILSTAR Satellite Communications System (MILSATCOM). This project will also provide space for the Consolidated Program Management Office, the Defense Security Service, and the Air Force Office of Special Investigation. | CURRENT SITUATION: Schriever AFB has experienced substantial mission

growth with the increasing presence of DoD satellite programs. During this time, there has been little corresponding growth in infrastructure. Requirements now far exceed the space available. The functions described are forced to occupy temporary facilities or are using facilities designed for technical requirements. These temporary facilities are six and eleven years old and are absorbing many times the costs required to operate and maintain permanent facilities. During the first five years, the annual costs averaged \$75,000. However, over the last three years, annual maintenance and repair costs have exceeded \$250,000. The largest temporary facility consists of approximately 67 trailers bolted together placed on concrete block columns. The unstable foundation requires the use of scarce operations and maintenance funds to correct severe settling problems. Insufficient insulation and inefficient heating and air conditioning results in wasted energy and large utility bills, contrary to DoD goals. Roof leaks are a constant problem, hampering the mission and damaging equipment. Foundation settlement under the columns, cracked columns, uneven floors, broken tie-down anchors, and buckled roof sheathing are some of the safety problems experienced. In May 1995, an architectural/engineering study addressed these issues and identified over one million dollars in repair costs.

IMPACT IF NOT PROVIDED: The follow-on engineering and contracting support functions for the diversified DoD satellite missions will continue to be housed in degraded temporary facilities with mission disruption and forced work-arounds. As these temporary facilities age, they will further deteriorate, incurring additional operation and maintenance costs of up to \$400,000 per year.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements". An Economic Analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Base Civil Engineer: Lt Col Carmelo Cruz, (719)567-4200. Add to Operational Support Facility: 4,450 SM = 47,899 SF.

10. Description of Proposed Construction: Foundation, perimeter walls, floor slab, and roof to match existing architecture of aluminum, glass, concrete, and stone. Provide all necessary support.

Air Conditioning: 530 KW.

11. REQUIREMENT: As required.

PROJECT: Athletic facility. (Current Mission)

REQUIREMENT: Resolve space and code deficiencies and progress toward meeting gender equity requirements of the National Collegiate Athletic Association (NCAA) and the Mountain West Conference. Construct new facility to resolve space and functional deficiencies and to allow the (FY02 MILCON) Phase 2, gender equity, reconfigurations within the Field House. Construct space for sports medicine, weight training, sports program offices, lockers, team meeting areas, athlete study area, sports and athletic education area, administrative offices, and storage. CURRENT SITUATION: All cadets participate in physical education and either intramural or intercollegiate athletic competition. The existing cadet athletic facilities were built to accommodate male cadet sports and athletic programs. When female cadets entered the Academy, no additional space was provided. All ten women's sports intercollegiate teams have been elevated to NCAA Division I competition and the facility requirements (namely locker rooms and coaches offices) for women's programs have increased as a result. Visiting teams either dress in hotel rooms, when available, or in make-shift areas because of the lack of a women's visiting team locker room. There are not enough locker rooms to accommodate men and women referees and multiple teams. Training and medical treatment areas are inadequate. The lack of private examining

rooms and insufficient treatment and rehabilitation space results in crowded and unprofessional conditions and less than optimum treatment. The existing weight rooms are too small to meet the number of cadets requiring strength training. Due to the space shortage, teams must be scheduled for less time in the weight rooms than needed, diminishing the effectiveness of the training and adversely affecting cadets' fitness and strength. The medical and strength training shortfalls are further exacerbated by educational constraints; with the institutional schedule of classes and meals, all athletes must be scheduled for the weight and medical training rooms during a single 4-hour block in the afternooon. Accessibility and utility code deficiencies require mitigation. IMPACT IF NOT PROVIDED: Locker and medical/training rooms have NCAA gender-equity deficiencies and fall short of NCAA Division I standards. Space and program shortfalls will be written up as deficiencies in the year 2000 NCAA certification visit to the Academy. Athletic training shortfalls preclude effective injury prevention work and result in less than ideal treatment and rehabilitation results. Personnel will continue to be exposed to accessibility, heating, ventilation, and air conditioning code deficiencies.

ADDITIONAL: There is no criteria/scope for this project in Air Force Handbook 32-1084, "Facility Requirements." However, the requirements for this project were developed by an engineering study and validated by an independent AFCEE team. All known options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exception has been prepared. Resolution of gender equity and other deficiencies will only be achieved after completion of this project and the FY02 Phase 2 project. Base Civil Engineer: Col Susanne Waylett (719) 333-2660. Athletic Facilities: 10,219 SM = 110,000 SF

- 10. Description of Proposed Construction: Reinforced concrete foundation, floor slab, masonry walls, roof system, fire protection, all lutilities, site preparation including partial demolition of existing ltennis courts, perimeter fence, and all necessary support ammenities.

  Functional areas include reception area, multi-purpose child care rooms, rest rooms, kitchen, and playground.

  Air Conditioning: 180 KW.
- 11. REQUIREMENT: 5,122 SM ADEQUATE: 1,506 SM SUBSTANDARD: 1,055 SM PROJECT: Construct a child development center. (Current Mission)

  REQUIREMENT: This facility requirement is in accordance with the Military Child Care Act of 1989. A properly sized child development center is required to provide supervised care and a development experience for dependent children aged six weeks through five years. The facility must provide a comfortable, clean, educational environment where military service members and DOD civilians can leave their children on an hourly, daily, or part-time basis, and provide secure and early developmental care for children.

CURRENT SITUATION: The existing CDC was built in 1979. The capacity is limited to 104 children. The center has a waiting list of over 350 children. Because of the large number of children, the center is filled to capacity early each morning, requiring parents in need of child care to find other providers in the civilian community. Additional space is needed. Total child care need is 619 spaces. With completion of a previous MILCON project we will meet only 39% of the need, far short of DoD's 65% by 2002 standard. This project will bring us to 544 spaces or 88% of the need. By the year 2005, DoD requires that we meet 80% of the

need. Without the new facility, Bolling AFB will continue to be out of compliance.

IMPACT IF NOT PROVIDED: Military personnel and their dependents will continue to use inadequate facilities and the waiting list will continue to grow. Lack of quality child care will contribute to personnel absenteeism, low morale, and has a negative impact on the military and civilian work force.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements" and DODI 6060.2, "Child Development Center Programs," published January 1993. An economic analysis was prepared comparing the alternatives of status quo, expansion, and new construction. Expansion was the recommended alternative that would provide the additional space needed at the Child Development Center at the lower life cycle cost. Base Civil Engineer: Col Randall Thady (202) 767-5566. Child Development Center: 2,550 SM = 27,438 SF

10. Description of Proposed Construction: Reinforced concrete and masonry walls, sloped metal roof, high bay roll up doors (four bays), hoists, concrete vault, paint room and administration areas. Includes paint room emission reduction system, power converter to simulate aircraft power and explosives safety items, and all necessary support. Demolish one facility (767 SM).

Air Conditioning: 279 KW.

| 11. REQUIREMENT: 2,036 SM ADEQUATE: 874 SM SUBSTANDARD: 767 SM | PROJECT: Construct a precision guided munitions (PGM) maintenance | facility. (Current Mission)

REQUIREMENT: A facility is required to support maintenance on developmental precision guided munitions and missile systems. The proposed multi-bay facility will be used to assemble, repair, test and inspect all guided munitions assets in a central location. Includes wide bay doors to accommodate all-up-round (AUR) containers, and substantial dividing walls and other explosive safety standards requirements to allow multiple munitions operations and support/administrative functions to continue during explosive operations. This facility will allow the Air Force to move leading edge technology programs such as AIM-9X, Advanced Medium Range Air-To-Air Missile (AMRAAM), AGM-130, and Miniature Munitions Technology Development (MMTD) out of substandard facilities. Relocate existing storage shed to another location.

| CURRENT SITUATION: The existing facilities currently used for missile and | PGM maintenance are outdated, too small and not designed to support | increasing PGM and missile maintenance workloads. The facilities do not | have the required pneumatic and electrical systems and the bay doors are

4. PROJECT TITLE	5. PROJECT NUMBER
	   FTFA963030

not large enough to accommodate the AUR containers. The combination of facility construction and explosive safety rules prevent simultaneous explosive and non-explosive operations, causing delays and lost productivity. These facilities are overcrowded and lack the environmental controls required to perform timely corrosion control within the munitions storage area. Assets must be scheduled with an outside agency and then loaded, transported, prepped, and painted, and finally returned to

IMPACT IF NOT PROVIDED: Precision-guided munitions maintenance support will continue to be performed in existing inadequate facilities.

Munitions technicians will continue to work around obstacles and build work-arounds into their procedures.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." An economic analysis has been prepared comparing the alternatives of new construction, revitalization, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Base Civil Engineer: Col Quincy Purvis, (850) 882-2876. Precision Guided Munitions Maintenance Facility: 1,162SM = 12,504SF.

10. Description of Proposed Construction: Convert existing dormitory to room-bath/kitchen-room modules and upgrade mechanical and electrical systems, interior and exterior finishes, bathroom fixtures, laundry rooms, and fire protection of Wing 'D' building 19. Includes asbestos removal, utilities, pavements, site improvements, replace existing roof system, and all necessary support.

Air Conditioning: 310 KW. Grade Mix: 72 E1-E4.

11. REQUIREMENT: 1,049 RM ADEQUATE: 534 RM SUBSTANDARD: 588 RM PROJECT: Upgrade dormitory. (Current Mission)

REQUIREMENT: A major Air Force objective is to provides unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform.

CURRENT SITUATION: The facility to be upgraded was constructed in 1954. The existing inadequate heating, ventilation and air conditioning (HVAC) system for this dormitory has created a warm, moist environment that promotes mold and mildew growth, making living conditions unhealthy. The existing HVAC system consists of individual fan-coil cooling units which are suspended from the ceiling. These individual fan-coil units do not provide adequate cooling capacity or humidity control for living quarters, are difficult to maintain, waste energy, are noisy, and often drip condensed moisture onto the carpet, room furshings, and personal belongings of the occupants. The roof leaks into the rooms and compounds moisture and mildew problems. There are collapsed ceilings, rotted pipes,

UPGRADE DORMITORY (72 RM)	FTFA003009

and ruined interior finishes. Television, telephone and electrical conduits run along exterior walls, creating safety and maintenance problems. Bathroom exhaust fans are inadequately sized and improperly located to ventilate odors and moisture. The water heaters and distribution systems are inefficient, taking too long to deliver hot water to the bathrooms. Asbestos containing materials pose a health hazard to dorm occupants and operations and maintenance personnel. The existing facility also does not comply with the new uniform barracks construction standards.

IMPACT IF NOT PROVIDED: Substandard living conditions will persist and morale, productivity, and career satisfaction of the enlisted force will continue to be degraded. This facility will require increased maintenance and will continue to fail to meet DoD standards and national building code requirements.

ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks construction standard known as "one-plus-one," established by OSD. All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. FY 1998 Unaccompanied Housing RPM conducted: \$768K. FY 1999 Unaccompanied Housing RPM conducted: \$780K. Future Unaccompanied Housing RPM conducted (estimated): FY00: \$810K; FY01: \$840K; FY02: \$880K; FY03: \$900K. Base | Civil Engineer: Col Quincy Purvis, (805) 882-2876. Upgrade dormitory: | 2,800SM = 30,128SF.

10. Descript	ion of	Proposed Constru	action. S	lite:	Dreparati	on 2 i	nch			

| 10. Description of Proposed Construction: Site preparation, 2 inch | asphalt pavement, curbs, gutters, and sidewalks. Relocate utilities and | traffic signals. Provide storm drainage. Includes aquisition of | right-of-way, demolition, and necessary disposal.

11. REQUIREMENT: As required.

PROJECT: Upgrade access roads. (Current Mission).

REQUIREMENT: Base road system improvements are needed to support increased traffic resulting from Special Operations Forces (SOF) revitalization. The lack of capacity causes significant traffic delays during rush hour, requiring the use of additional personnel to direct traffic. A new Defense Access Road is urgently needed. This requirement has been certified as important to national defense, per Title 23 USC 210, necessitated by expansion of existing Air Force activities which result in a significant impact on the adjacent highways.

CURRENT SITUATION: The existing road system was constructed for a base population of 2000 to 3000 personnel. The base population has tripled since then. A new east side community center has attracted many retired and active duty patrons and increased traffic flow dramatically. The present road network cannot adequately support the increased traffic flows. Traffic counts have increased by 22 percent at the main gate and over 190 percent at the east gate in the past five years.

IMPACT IF NOT PROVIDED: Unacceptable levels of congestion will occur due to increased traffic through the east gate. Traffic accidents and pedestrian hazards at intersections will worsen as traffic volumes increase. There have been 27 traffic accidents at the intersection of Lovejoy and Hill Avenues in the past two years.

ADDITIONAL: This project meets the criteria specified in Air Force

10. Description of Proposed Construction: Widen Independence Rd from east gate, widen Cody Ave with median and turn lanes, realign Simpson Ave, Bartley St and related intersections. Replace guard house. Relocate boundary fence. Construct a new Defense Access Road between the east gate and Hill Ave to replace the current access route.

Air Conditioning: 5 KW.

## 11. REQUIREMENT: As required.

PROJECT: Upgrade access roads. (Current Mission).

REQUIREMENT: Base road system improvements are needed to support increased traffic resulting from Special Operations Forces (SOF) revitalization. The lack of capacity causes significant traffic delays during rush hour, requiring the use of additional personnel to direct traffic. A new Defense Access Road is urgently needed. This requirement has been certified as important to national defense, per Title 23 USC 210, necessitated by expansion of existing Air Force activities which result in a significant impact on the adjacent highways.

CURRENT SITUATION: The existing road system was constructed in the 1950's for a base population of 2000 to 3000 personnel. The base population has tripled since then. A new east side community center has attracted many retired and active duty patrons and increased traffic flow dramatically. The present road network cannot adequately support the increased traffic flows. Traffic counts have increased by 22 percent at the main gate and over 190 percent at the east gate in the past five years.

| IMPACT IF NOT PROVIDED: Unacceptable levels of congestion will occur due | to increased traffic through the east gate. Traffic accidents and | pedestrian hazards at intersections will worsen as traffic volumes

increase. There have been 27 traffic accidents at the intersection of Lovejoy and Hill Avenues in the past two years.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was performed. A certificate of exception has been prepared. BASE CIVIL ENGINEER: Lt Col Hamill (850) 884-7701. Improve Cody Avenue: 31,000 SM = 37,200 SY; Improve Independence Road: 35,500 SM = 42,600 SY.

- | 10. Description of Proposed Construction: Facility with reinforced | concrete foundation and floor slab, precast exterior walls and roof | system. Includes elevator, utilities, parking and all necessary systems | to support an education facility. Provide antiterrorism/force protection | measures. Demolish three facilities (4,100 SM). | Air Conditioning: 933 KW.
- | 11. REQUIREMENT: 8,510 SM ADEQUATE: 0 SUBSTANDARD: 5,576 SM | PROJECT: Construct a Defense Equal Opportunity Management Institute | (DEOMI) Facility. (Current Mission).

REQUIREMENT: An adequate facility is required to train all DoD personnel in Equal Opportunity (EO) and human relations. Facility requirements include classroom space, faculty offices, library, support functions, computer room, study rooms, break rooms, and a multi-purpose classroom/conference room/auditorium/ceremonies room. The Air Force is the executive agent for this DoD program.

CURRENT SITUATION: DEOMI was estabilished at Patrick AFB in September 1971. They are presently located in four facilities on base, three of which are located in the runway clear zone. These facilities are on average 45 years old and were not intended for the current use. Existing classroom space is inadequate to support the current class load. Break areas and student study areas are nonexistent. The library is inadequate to house large volumes of reference materials. Existing lecture halls are not large enough to hold the large classes for orientation, class lectures, and other events such as graduation ceremonies. Faculty offices are cramped and do not provide adequate space for proper class planning or counseling.

4. PROJECT TITLE	5. PROJECT NUMBER
	İ
DEFENSE EQUAL OPPORTUNITY MANAGEMENT INSTITUTE FACILITY	SXHT993001

| IMPACT IF NOT PROVIDED: This is the only DoD organization with the | mission of training personnel in the area of equal opportunity. No other | facilities on PAFB or in the local off-base area can support this | requirement. Without this facility the Air Force will not be able to | support the DEOMI training requirements.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements". An economic analysis has been prepared comparing alternatives of new construction and status quo. Based on the present value and benefits of the respective alternatives, new construction was found to be the most cost effective over the life of the project. Base Civil Engineer: Lt Col John Morrill, DSN 854-4041. DEOMI Facility: 8510 SM = 91,568 SF.

10. Description of Proposed Construction: Construct a two-bay high-bay hangar with concrete foundation, steel frame, climate control, fire protection, and security provisions for low observable/composite maintenance. Upgrade maintenance hangar by adding climate control, fire protection, and security provisions. Construct high-bay addition with concrete walls and foundation and metal roof for maintenance training. Air Conditioning: 415 KW.

## 11. REQUIREMENT: As required.

PROJECT: F-22 add/alter maintenance facilities. (New Mission)

REQUIREMENT: Modify existing buildings and construct new facilities to provide adequately sized, configured, and secure maintenance facilities to support the beddown of the next generation, multi-roled F-22 fighter for pilot training at Tyndall AFB. The F-22 is designed with state of the art technology and composite materials to meet stealth mission requirements. These composites have unique equipment and materials for maintenance and repair that require specialized facilities for training and maintenance activities. Due to the mission of the F-22 and the quick burn rate of composite materials, the maintenance and maintenance training facilities must have a controlled environment, fire protection, and security provisions.

CURRENT SITUATION: Tyndall AFB does not have adequate or excess facilities to beddown the F-22. It will replace the F-15 in a phased program starting in FY03. The existing corrosion control facility is similar to the type of facility required for composite material maintenance, but it does not meet the F-22 requirements for size and fire protection and it is needed to support the F-15. A new 2-bay,

AIR FORCE (computer generated)		
3. INSTALLATION AND LOCATION		
4. PROJECT TITLE	5. 	PROJECT NUMBER
F-22 ADD/ALTER MAINTENANCE FACILITIES	i	XLWU003002

EPA-compliant facility that meets all major low observable restoration and composite material repair requirements is essential in maintaining the modern materials and coating used on this aircraft. Of the five hangars on Tyndall, none meet F-22 requirements for temperature and humidity control, for laminar air flow for fire protection, or for security provisions. All hangars have natural ventilation and heating capability but have no cooling capacity and no humidity control. Existing water deluge fire protection systems must be upgraded with an aqueous film forming foam (AFFF) fire protection system. Existing hangar configuration and door mechanisms do not provide the means to limit access. The existing F-15 field training facility is not large enough to accommodate all training devices and provisions of the F-22 maintenance training program. The engine, landing gear, and forward fuselage trainers all require a high-bay area. In addition, the existing facility does not have classified classrooms or storage areas.

IMPACT IF NOT PROVIDED: F-22 pilot training cannot operate from Tyndall AFB without maintenance facilities available with the proper environmental controls, fire protection, and security measures to provide necessary maintenance and maintenance training. Low observable coatings and composite materials to provide the stealth capability will be compromised. Aircraft availablity will be limited resulting from aircraft down for maintenance because of limited hangar space. Personnel will not be fully trained due to the lack of secure training facilities.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." A preliminary analysis of reasonable options for accomplishing this project (status quo, add to and lalter, and new construction) indicates that add to and alter is the only option that will satisfy operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared. Base Civil Engineer: Lt Col Arvil E. White III (850) 283-3283. F-22 Maintenance Facilities: 6,107 SM = 65,711 SF

10. Description of Proposed Construction: Construct operations facility with reinforced foundation, split-faced block walls, standing seam metal roof, security and shielding provisions, environmental controls, communication networking and all necessary support. Facility will include simulator area with simulator bays, logistic support area, management space, and flight academic training space.

Air Conditioning: 180 KW.

## 11. REQUIREMENT: As required.

PROJECT: Construct an F-22 operations facility. (New Mission)

REQUIREMENT: Adequately sized, configured, and secure operations facility providing simulator and academic flight training is required to support the beddown of the next generation, multi-roled F-22 fighter at Tyndall AFB. Space is required to house the F-22 full mission trainer (FMT) simulators and support functions. FMTs provide the highest transfer of pilot skills from device level to the aircraft. Academics flight training space is required to provide the academic training and mission briefs in a secure environment. Due to the mission of the F-22, this operations facility must be shielded and have the necessary security provisions. Intense computer support for both the classrooms and the FMTs dictates additional space and HVAC for this facility.

CURRENT SITUATION: Tyndall AFB does not have adequate or excess facilities to beddown the F-22. The F-22 will replace the F-15 in a phased program starting in FY03. The existing F-15 simulator facility is too small to accommodate F-22 simulator requirements. Extensive modifications would be required to support the F-22 FMTs, requiring F-15 simulator operations to cease for up to eight months. This is

unacceptable due to the continued F-15 pilot training load. The F-15 academic facility is not large enough to support F-15 and F-22 training. The facility does not meet the security requirements required for F-22 training. Modifications to the existing academics facility would cause unacceptable disruption to F-15 training. Space cannot be shared between the two due to the F-22's classified mission training.

IMPACT IF NOT PROVIDED: F-22 fighter training unit cannot operate from Tyndall AFB without an operations facility available with the proper shielding and security measures to provide necessary simulator and academic training. F-22 pilot qualification training cannot be conducted and F-22 pilot training will be delayed. Development of pilot skills prior to transitioning to the aircraft cannot be done without FMT simulators.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." A preliminary analysis of reasonable options for accomplishing this project (status quo, add to and alter, and new construction) indicates that only the new construction option will satisfy operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared. Base Civil Engineer: Lt Col Arvil White III (850)283-3283. Operations Facility: 3,000 SM = 32,280 SF

- 10. Description of Proposed Construction: Reinforced concrete foundation and floor slabs, masonry walls, roof system, fire protection system, utilities, site work, landscaping, parking and necessary support facilities.
- | 11. REQUIREMENT: 2,715 SM ADEQUATE: 0 SUBSTANDARD: 849 SM | PROJECT: Construct an Air Support Operations Squadron facility. (Current Mission)

REQUIREMENT: A facility to adequately support the administrative, training, vehicle and equipment maintenance, and storage requirements for the Air Support Operations Squadron (ASOS) located at Fort Stewart. The ASOS provides garrison weather support and close air support for Army divisions, brigades, and battalions. It also maintains mission-ready air support operations personnel, radios, vehicles, and mobility equipment deployable worldwide.

CURRENT SITUATION: The ASOS at Fort Stewart currently operates out of four temporary wooden structures originally scheduled for demolition in 1981. None of the facilities have fire detection, suppression or alarm systems. All facilities are in an advanced state of deterioration with extensive wood rot and termite damage, and the electrical systems are inadequate for sophisticated electronic equipment. The vehicle compound is geographically separated from the facilities and it can only provide necessary shelter for 19 of 26 vehicles assigned to the squadron. Inadequate storage space for mobility/combat equipment forces personnel to use mechanical rooms and privately owned vehicles for storage.

IMPACT IF NOT PROVIDED: The ASOS functions will continue to be geographically separated which negatively impacts unit effectiveness, effeciency and unit morale. Improper storage for vehicles and equipment

- 10. Description of Proposed Construction: Construct a 3 million liter per day disinfection and filtration water treatment plant to comply with the Surface Water Treatment Rule (SWTR) and reduce total trihalomethan(TTHMs) to within the Safe Drinking Water Act (SDWA) maximum contaminant level. Force protection/anti-terrorism measures include fencing and a pre-engineered covered structure.
- 11. REQUIREMENT: 1 LS ADEQUATE: 0 SUBSTANDARD: 1 LS

  PROJECT: Construct a water treatment plant. (Current Mission)

  REQUIREMENT: This is a Level I environmental compliance requirement.

  Moody AFB is out of compliance with the SWTR and the Georgia Rules for Safe Drinking Water. Many of Moody's wells are under the influence of surface water which mandates a more stringent treatment than for standard wells. The new treatment plant will produce water that will comply with the SDWA/SWTR.

CURRENT SITUATION: Moody AFB needs a safe water source to comply with the SWTR. Analysis of Moody's production wells on the main base and the munitions areas show surface water contamination. This ground water under the direct influence (GWUDI) of surface water was cited in a 2/7/96 letter of non-compliance from the Georgia Department of Natural Resources to Base Civil Engineer. New well construction has been tried and the new well water also tested positive for GWUDI. Due to these results Moody AFB must construct a surface water treatment plant capable of removing organisms such as giardia and cryptosporidium as well as organic material. There are dead ends in the main base water distribution system, which result in zero residual chlorine and high Total Trihalomethanes concentration. This is a violation of the SDWA and a public health concern. In addition, the facilities on the perimeter of Moody AFB are currently not connected to

ĺ		
WATER TREATM	ENT PLANT	QSEU983003

the base water supply and have their own water wells. These wells have also been plagued with the same compliance problems. Because of these health and other aesthetic problems these facilities use bottled water for drinking.

| IMPACT IF NOT PROVIDED: Moody AFB will not comply with the SDWA and will again face enforcement action. Failure to construct the treatment plant and distribution loop will preclude removing microscopic organisms and lorganic material and will prevent maintaining proper chlorine residuals and consequently minimizing the TTHM concentration. Base personnel will continue to consume water contaminated with these microscopic, disease carrying organisms and THMs.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." Base Civil Engineer: Lt Col Guy Wells, (912) 333-3601.

- | 10. Description of Proposed Construction: Install deluge and wet | sprinkler valves, detectors, sprinklers, pumps, controls, water storage | tank, automatic wet sprinkler system, floor drains, oil-water separator, | emergency exits, and all necessary support.
- |11. REQUIREMENT: 34,065 SM ADEQUATE: 0 SUBSTANDARD: 34,065 SM |PROJECT: Upgrade hangar complex. (Current Mission)

REQUIREMENT: Provide an adequate fire detection and protection system to meet current fire protection standards for aircraft hangars and associated administrative and storage areas.

CURRENT SITUATION: The existing facility was constructed in 1941. Fire trucks are required to stand by whenever fueled aircraft are parked in the hangar. There is no fire protection system in administrative and storage areas. The existing building systems cannot support a new fire protection system without major upgrades.

IMPACT IF NOT PROVIDED: Personnel and aircraft valued at millions of dollars will continue to be at risk during maintenance. The adjacent maintenance complex and stored war reserve material will also continue to be at risk due to the lack of a fire protection system. Fire trucks used to protect hangared aircraft will be out of position for rapid response to airfield emergencies, increasing response time.

| ADDITIONAL: This project meets the scope/criteria specified in Air Force | Handbook 32-1084, "Facility Requirements." A preliminary analysis of | options was performed. Only one option meets operational requirements. | Therefore a full economic analysis was not performed. A certificate of | exception has been prepared. BASE CIVIL ENGINEER: Lt Col Torchia, (808) | 449-1660. Upgrade Water Deluge System: 10,059 SM = 107,631 SF; | Closed-Head Auto Sprinklers: 24,006 SM = 256,864 SF.

- 10. Description of Proposed Construction: Construct no-drop target sites, emitter sites, and roads to the emitter sites.
- 11. REQUIREMENT: As required.

PROJECT: Construct Enhanced Training Range, Idaho Phase III (New Mission)
REQUIREMENT: An adequate training range is required to allow the F-16,
F-15, KC-135 and B-1B crews to train together in real world battle
situations. To provide realistic training, the range requires widely
separated threat emitter sites and simulated target sites constructed to
resemble target complexes. All-weather roads are necessary to provide
immediate access for maintenance and repair of range facilities and
equipment. Security fencing is required around the simulated target and
emitter sites.

CURRENT SITUATION: This project will consolidate a wide array of functions now conducted at various training ranges and eliminate the costly workarounds inherent with non-essential flying hours required to transit to and from the ranges. Existing training ranges, airspace and emitter sites offer limited realism, flexibility and quality. Remote ranges require transit time that expends limited flying hours and funding, yet yields minimal training value. An integrated set of training facilities incorporating Saylor Creek Range and the existing Military Operations Areas will provide the flexibility to vary attacks and tactics, present aircrews with challenging, realistic battlefield situations, and allow for ready access on a day-to-day basis. This is Phase III of a three-phase project.

| IMPACT IF NOT PROVIDED: Continuation of training without improvements | will not provide the enhancements needed by aircrews to fly against | realistic targets under battlefield conditions. The Air Force will

- | 10. Description of Proposed Construction: A munitions storage facility | consisting of multicubical type segregated magazine of reinforced concrete | having 30 bays, concrete floor and a frangible and non-flammable roof and | a munitions inspection and maintenance area. Also included are roads, | parking, fencing, security lighting and alarms, and necessary support. | Air Conditioning: 20 KW.
- | 11. REQUIREMENT: 800 SM ADEQUATE: 0 SUBSTANDARD: 38 SM | PROJECT: Construct a munitions storage facility and land acquisition. | (Current Mission)

REQUIREMENT: Adequate munitions storage and inspection area is required to support training and operational requirements. Space must be provided to support the security police ground defense unit, the explosives ordnance disposal team, HQ AMC combat controllers, and training needs of various base organizations. Location should conform to quantity distance criteria for minimum blast and fragmentation distances from inhabited buildings and public roadways.

CURRENT SITUATION: The existing munitions storage/training facility is too small. This lack of space requires munitions to be stored at Little Rock AFB and an army depot 30 miles away. The existing location does not meet quantity-distance criteria for minimum blast and fragmentation distances to inhabited buildings (1,250 feet; nearest building is 250 feet) and public roadways (750 feet; nearest road is 100 feet). There is no available space on base to construct this facility. Therefore, land must be purchased as part of this project.

| IMPACT IF NOT PROVIDED: Mission requirements for training, mobility, and operations will continue to be adversely affected by depending on other

- | 10. Description of Proposed Construction: Reinforced concrete foundation | and floor slabs, steel frame, brick veneer exterior walls, sound | attenuation, and sloped roofs. Includes lounge areas, laundries, | room-bath-kitchen-room modules, storage, exterior site work, communication | requirements, fire protection systems, and all supporting facilities. | Work includes parking and demolition of one facility (3,078 SM). | Air Conditioning: 175 KW. Grade Mix: 96 E1-E4.
- 11. REQUIREMENT: 1,305 RM ADEQUATE: 636 RM SUBSTANDARD: 144 RM PROJECT: Construct a dormitory. (Current Mission)

REQUIREMENT: A major Air Force objective provides unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. The AF objective is for dormitories to meet the one-plus-one design standard. This project is in accordance with the Air Force Dormitory Master Plan.

CURRENT SITUATION: As verified by the Air Force Dormitory Master Plan, the base has insufficient facilities to adequately accommodate permanent party unaccompanied enlisted personnel required to live on-base per Air Force policy.

IMPACT IF NOT PROVIDED: Adequate living quarters which provide a level of privacy required for today's airmen will not be available, resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel.

ADDITIONAL: This project does meet the criteria/scope specified in Air

| 10. Description of Proposed Construction: Two-story facility consisting | of concrete foundation, with steel frame, precast concrete curtain walls, | metal roofing system, fire protection system, parking, utilities and all | necessary support. Includes relocation of transportation yard and | demolition of one facility (12,948 SM). | Air Conditioning: 770 KW.

REQUIREMENT: 105,995 SM ADEQUATE: 69,309 SM SUBSTANDARD: PROJECT: Construct a technical training facility. (Current Mission) REQUIREMENT: An energy efficient facility with laboratory, high-bay and classroom areas which can be configured to meet varied and changing requirements to support technical training in fields to include radar and satellite systems, flight simulations, combat controller, and air traffic control. Facility will be used to train 600 students-per-day. CURRENT SITUATION: The existing facility was built in 1941 and is obsolete for current training requirements. This facility has not undergone any modernization program or reconfiguration suitable for current training programs. The mechanical system in this facility is difficult to maintain. During the summer, some classrooms and labs become extremely cold while others are extremely warm. In order to continue training in these cold areas, students and staff are forced to wear coats and gloves. This condition makes it very difficult to work on laboratory equipment, simulators and computer keyboards. The existing electrical distribution system has reached its capacity and does not meet current National Electric Code requirements. Ungrounded wiring and overloaded circuits are safety hazards causing breakers and other power equipment to fail on a monthly basis. These power failures interrupt training and

cause training delays. Lighting levels are 40% below standards for classrooms and laboratories. The existing facility has no fire sprinkler system which is a National Fire Code requirement. Asbestos and lead paint materials are located throughout the facility.

IMPACT IF NOT PROVIDED: Students and faculty will continue to train in substandard classrooms and laboratories. Obsolete mechanical systems will continue to waste energy. The existing facility will not adequately meet the requirements of the training squadrons. Keesler AFB will not be able to conduct technical training on systems being developed for the next century.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. New construction was found to be the most cost efficient over the life of the project. Base Civil Engineer: LtCol Wendell Trivette. (228) 377-2615. Technical Training Facility: 10,300 SM = 110,828 SF

- | 10. Description of Proposed Construction: A concrete apron assembly area | for built-up munitions storage. The bomb build-up facility will have a | concrete foundation and slab, metal siding and roof; with roll-up doors, | bridge crane, compressed air system, security system and office area. | Relocate support office and RRR training site. Support includes site | improvements, lightning protection, utilities, and roads.
- 11. REQUIREMENT: 16,200 LS ADEQUATE: 0 SUBSTANDARD: 0

  PROJECT: Construct conventional munitions assembly area. (New Mission)

  REQUIREMENT: The B-2 mission expansion includes conventional munitions

  capability. A facility is required to assemble and preload modern

  conventional munitions on B-2 launchers. These new conventional munition

  types include GBU-28, Joint Standoff Weapon (JSOW), Joint Air-to-Surface

  Standoff Missile (JASSM), and the Joint Direct Attack Munition (JDAM).

  This facility will handle dual build-up lines with drive through safety

  and night time operations. It includes an and administrative area to

  support supply & munitions handlers. An adequate area is also required to

  temporarily store pre-built and pre-loaded munitions on trailers (holding

  area). A support office and training area must be moved to avoid

  violating quantity-distance criteria driven by the addition of

  conventional munitions.

CURRENT SITUATION: The initial shipments of these new smart conventional munitions were to be delivered in FY98, but were stored at other bases due to the lack of facilities at Whiteman AFB. Currently there is a very limited area to build munitions (one trailer at a time) while following DOD and Air Force directives for munitions distance and fragmentation criteria. The area is small and inhabited by non-related functions. When it is necessary to build munitions, personnel in non-related functions

|must be evacuated. The original B-2 mission did not include a large conventional munitions role, therefore facilities or site areas for mass build-up of heavy blast munitions are not available. IMPACT IF NOT PROVIDED: Part of the current taskings for the B-2 envisions the ability to strike and restrike using conventional munitions from Whiteman. The current munition assembly facility cannot support a full generation or regeneration tasking for conventional munitions. The B-2 conventional munitions mission capability will be significantly reduced. Mission implementation will be curtailed without adequate munitions asembly area required for the B-2 mission. ADDITIONAL: This project meets the criteria/scope specified in AFH 32-1084, Facility Requirements." All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A certificate of exception has been prepared. Base Civil Engineer: Lt Col Brevard. Phone: 816-687-3503. Bomb build-up facility: 1,300 SM = 13,993 SF; Built-up Munitions Storage: 14,900 SM = 160,382 SF; Support Office: 930 SM = 10,010 SF; Canopy: 350 SM = 3,767 SF

- | 10. Description of Proposed Construction: Reinforced concrete foundation | and floor slab, concrete masonry walls, sloped steel roof deck. Includes | vehicle and equipment staging/storage, van configuration support, office | space, classrooms, two class "A" vaults, critical component storage, | technical order library, and all necessary support. Provides minimum | antiterrorism/force protection measures. Demolish two facilities. | Air Conditioning: 15 KW.
- 11. REQUIREMENT: 2,468 SM ADEQUATE: 0 SUBSTANDARD: 1,385 SM

  PROJECT: Construct a minuteman three (MMIII) missile service facility.

  (Current Mission)

REQUIREMENT: A properly sized, configured and sited facility is required in which missile control codes and electronics laboratory (E-Lab) functions can be accommodated. This project provides space for missile codes production, electronic equipment checkout and repair, critical component and equipment storage, staging and issue, vehicle and equipment loading, vehicle and team dispatch control, precision measurement equipment laboratory (PMEL) work area and storage, training areas, classrooms, and administrative areas.

CURRENT SITUATION: The existing building no longer meets the needs of leither Codes or E-Lab functions. Both organizations are now forced to accomplish critical tasks in cramped and crowded space. They have outgrown the current space requirements as a result of scheduled modification/upgrades to the Minuteman III ICBM system (e.g., the guidance replacement program). The Codes and E-Lab sections need additional class "A" vault space which is currently inadequate for mission needs. The current vaults are substandard and require multiple waivers of DoD and Air

Force security requirements. Insufficient equipment cooling capacity requires make-shift duct work be run directly to test equipment racks to meet cooling requirements. When air conditioning is lost or cooling loads cannot be met during critical component testing, that testing must be reaccomplished. Power is commercially supplied with no back up power supply system. When power is lost, some test equipment may require up to a 3-day warm-up depending on the duration of power loss. In addition, E-Lab personnel are forced to perform most vehicle loading and unloading activities outdoors under severe weather conditions which subjects sensitive electronic nuclear certified components to damaging environments.

IMPACT IF NOT PROVIDED: Missile operations and maintenance functions will continue to operate in congested, crowded workcenters that detract from the quality of work performed and the morale of highly trained operators. and technicians. Storage of nuclear certfied components will continue to displace workers leading to further congestion. E-Lab personnel will continue to perform most vehicle loading and unloading activities outdoors subjecting sensitive equipment to extreme weather conditions. Without back-up power, testing of critical components will require reaccomplishment after power outages degrading the efficiency of the squadron.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." An economic analysis has been prepared comparing the alternatives of new construction, revitalization, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Base Civil Engineer: Lt Col Don Gleason, (406)731-6188. Electronics and Code Shops: 1,460SM = 15,710SF; Administrative: 1,008SM = 10,846SF.

- 10. Description of Proposed Construction: Two-story facility with structural steel frame, brick exterior walls, sloped roof system, indoor running track, gymnasium, racquetball courts, specialized flooring, mechanical/electrical/fire protection and detection/communications systems and other necessary support. Demolish one facility (3,870 SM).

  Air Conditioning: 150 KW.
- 11. REQUIREMENT: 4,750 SM ADEQUATE: 0 SUBSTANDARD: PROJECT: Fitness Center. (Current Mission) REQUIREMENT: An adequately sized and properly configured facility is required for the daily training and exercise for the base population. Space is required for basketball, volleyball, racquetball, and handball courts, an indoor running track, weight room, and men's and women's locker and shower rooms. This project also includes space for the wellness center for a one-stop shopping approach for health, wellness, and fitness. CURRENT SITUATION: The existing facility is not large enough to accommodate all the programs necessary to maintain a well-balanced offering of aerobic and anaerobic activities as well as individual and team sports. The center must currently accommodate 24 programs but the existing space is not configured to handle additional needed activity space. Overcrowding has become a problem despite 18-hour operations to meet the needs of flightline personnel and air crews supporting the KC-10 and mobility mission. The expanded demand for circuit training has forced the staff to use the badly needed court space in the main gymnasium for circuit training equipment (universal, nautilus, resistance training, stationary cycles, etc.), resulting in damage to the existing court space. Existing materials and finishes, due to constant usage of the facility,

have degraded and in some cases caused safety hazards in physical training areas.

IMPACT IF NOT PROVIDED: The sports and physical fitness center will not be able to provide adequate services to base personnel that depend on this facility for sports and physical fitness activities required to support military duty and a healthy life style. This will result in degraded morale and mission effectiveness.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." This project also meets the criteria/scope specified in the AMC "Guide to Excellent Services Facilities." An economic analysis has been prepared comparing alternatives of new construction, addition/alteration, and status quo. New construction was found to be the most cost-effective over the life of the project. BASE CIVIL ENGINEER: Lt Col Seb Romano, (609) 724-3033. Fitness Center: 4,750 SM = 51,130 SF

- |10. Description of Proposed Construction: Construct dangerous cargo pads | to include aircraft loading and munitions marshalling area. Construct | connecting taxiways, asphalt shoulders, and install airfield pavement | lighting and marking, environmental remediation, and supporting utilities. | Demolish pavement (24,000 SM).
- 11. REQUIREMENT: As required.

PROJECT: Construct five dangerous cargo pads. (Current Mission)

REQUIREMENT: Adequately sized, dangerous cargo pads, located within the explosive quantity/distance zone, are required to support loading and unloading of explosives or other dangerous cargo. These pads must be able to support fully loaded military and Civil Reserve Air Fleet (CRAF) wide-bodied large frame aircraft. These pads are required to support US SOCOM, Joint Chiefs of Staff, Joint Special Operations Command, and 43 Air Wing plans for the deployment of the US Army 18th Airborne Corps and the 82nd Airborne Division. Hydrant refueling and isolator valve pits connected to the existing hydrant refueling system are also required to support quick aircraft turnaround. Taxiways are required to provide aircraft access/egress.

CURRENT SITUATION: Hazardous cargo loading/unloading is currently performed on four remote taxiways. These taxiways are located within and violate the 1,000 foot safety clearance zone (from the centerline of the runway) and explosive quantity/distance criteria. Using these narrow taxiways for dangerous cargo pads restricts aircraft maneuverability, restricts and fragments cargo loading/unloading operations and presents a constant foreign object damage (FOD) hazard when either C-5 or KC-10 aircraft load/unload dangerous cargo. The current configuration allows two C-5 aircraft to become trapped in the area if one breaks down or has

2. DATE
Α
5. PROJECT NUMBER
TMKH013009

trouble loading. This requires closing the runway until the aircraft can be towed from the area.

IMPACT IF NOT PROVIDED: If this project is not accomplished, continued additional sorties will continue to be required to meet major theater war deployment requirements. Closing the runway (due to removing inoperable aircraft from one of the four remote taxiways) would make it impossible to support training and contingency operations associated with both Pope AFB's and the Army's wartime mission.

ADDITIONAL: This project meets the criteria/scope specified in the Air Force Handbook 32-1084, "Civil Engineering Facility Requirements." A preliminary analysis of reasonable options for accomplishing this project (status quo, renovation, and new construction) was done. It indicates new construction is the only option that will satisfy operational requirements. Therefore, a full economic anlaysis was not performed.

BASE CIVIL ENGINEER: Lt Col John Cawthorne, (910) 394-2561 Concrete Apron and Taxiway: 102,800SM = 1,106,530SF; Stressed Asphalt Apron and Shoulders: 33,000SM = 355,209SF; Non-Stressed Asphalt and Shoulders: 27,000SM = 290,626SF; Lighting/Marshalling/Parking Area: 3,115 SM = 33,530 SF

|10. Description of Proposed Construction: Remove and replace existing | concrete pavement and base at the West ramp parking Aaron, and adjacent | paved shoulders, replace hydrant fueling system, fuel pits, and | underground utilities. Include the necessary demolition, cleanup, | marking, lighting, and all necessary support.

11. REQUIREMENT: As required.

| PROJECT: Replace west ramp, phase I. (Current Mission)
| REQUIREMENT: Replacement of the existing concrete pavement and base at | the west ramp parking apron, adjacent shoulders, hydrant fuel system, | underground utilities, and lighting is required. An increase in grade of | gross slope of the ramp is required to improve the existing drainage | system and to keep the subsurface water away from the slabs. The Air | Force Civil Engineering Support Agency's (AFCESA) pavement evaluation | report prepared in 1998 recommended reconstruction of the west ramp, and | adjacent taxiways. The west ramp pavement's condition was rated poor, and | the adjacent taxiways pavement's condition was rated poor and very poor. | These areas are highly utilized by the 445th Airlift Wing's C-141B | aircraft which fly approximately 1,100 sorties annually. | CURRENT SITUATION: The west ramp and taxiway pavements that lead in and

out of the west ramp were constructed in 1959. Numerous repair projects on the taxiways over the last 30 years have repaired durability cracked areas, replaced random slabs, and replaced joint sealants. The most common deterioration of the taxiways are longitudinal cracks, durability cracking, spalling, and patching. The west ramp apron areas are in similar condition to the taxiways and the deterioration is identical. Extensive patchwork has been completed to maintain these old pavements on the West Ramp. Unfortunately, durability cracking continues to occur in

		_	

the original pavement and in some patches. Some areas show initial stages of durability cracking, and others show durability cracking in its later stages. The cracks have laced together and begun to break apart and spall. A considerable amount of foreign object damage (FOD) is generated by these distresses which causes operational problems.

IMPACT IF NOT PROVIDED: Maintenance and repair cost will continue to escalate. Each repair project puts severe restrictions on the aircraft mission during construction. Mission accomplishment will be hampered by the inadequate, and poor condition of these airfield pavements. In addition, there is a higher risk to aircraft and personnel due to the relatively higher level of FOD associated with repaired pavements versus replaced pavements. If these situation continues, it could result in serious and irreparable consequences.

ADDITIONAL: This project meets the criteria/scope as specified in Air Force Handbook 32-1084, "Facility Requirements". Base Civil Engineer: Col Jeffery Charles (937) 257-6214. Replace West Ramp, Phase I: 197,117 SM = 2,121,000 SF; 46,071 SM = 49,500 SF

|10. Description of Proposed Construction: One-bay structure with |concrete slab on pier and grade beam, steel frame, masonry walls, roof, |fire wall, fire suppression system, and all other necessary support. |Air Conditioning: 35 KW.

| 11. REQUIREMENT: 29,622 SM ADEQUATE: 24,557 SM SUBSTANDARD: 3,885 SM | PROJECT: Construct a depot corrosion control strip facility. (Current | Mission)

REQUIREMENT: An environmentally safe paint stripping facility is required to perform corrosion control for all presently assigned aircraft (B-1, B-52, KC-135, E-3 etc.). The facility must incorporate the most modern paint stripping technologies and reduce the use of volatile organic componds (VOCs) as stripping agents.

CURRENT SITUATION: Implementation of the Clean Air Act Amendment of 1990 and the National Emission Standards for Hazardous Air Pollutants (NESHAP) of 1998, requires significant reduction in VOC emissions from paint stripping. Plans are underway to reduce the VOC emissions with a new manual dry media blast technology. The existing facilities are not large enough to accommodate E-3 and B-52 aircraft utilizing the new dry blast system. Currently E-3 aircraft are stripped in an existing paint bay reducing the capacity needed to support painting of the assigned aircraft.

IMPACT IF NOT PROVIDED: A shortfall in depot aircraft strip capabilities will exist at Tinker AFB. Critical depot aircraft corrosion control will be deferred or contracted to an outside source at greater expense. The new strip technology must be incorporated into the corrosion control process to ensure compliance with the NESHAP and continue to meet customer needs.

## needs.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing, contracting and status quo alternatives. Based on the net present values and benefits of respective alternatives, new construction was found to be the most cost efficient over the life of the project. The requirement for this project was validated by the Joint Service Depot Maintenance Industrial Military Construction Review on 20 May 98. Base Civil Engineer: Lt Col Mohsen Parhizkar, (405) 734-3451. Depot Corrosion Control Strip Facility: 5065SM = 54,500SF.

| 10. Description of Proposed Construction: Reinforced concrete foundation | and floor slabs, masonry walls and roof. Includes room-bath/kitchen-room | modules, laundry rooms, storage, lounge areas, site preparation, and all | other supporting facilities. Relocate ball field. | Air Conditioning: 200 KW. Grade Mix: 96 E1-E4.

11. REQUIREMENT: 1,489 RM ADEQUATE: 624 RM SUBSTANDARD: 188 RM

| PROJECT: Construct a dormitory. (Current Mission)
| REQUIREMENT: A major Air Force objective is to provide unaccompanied | enlisted personnel with housing conducive to their proper rest, relaxation | and personal well-being. Properly designed and furnished quarters | providing some degree of individual privacy are essential to the | successful accomplishment of the increasingly complicated and important | jobs these people must perform. This project is in accordance with the | Air Force Dormitory Master Plan.

CURRENT SITUATION: As verified by the Air Force Dormitory Master Plan, the base has insufficient facilities to adequately accommodate permanent party unaccompanied enlisted personnel required to live on-base per Air Force policy.

| IMPACT IF NOT PROVIDED: Adequate living quarters will continue to be | unavailable resulting in degradation of morale, productivity, and career | satisfaction for unaccompanied enlisted personnel. Lowered morale will | contribute to retention difficulties for the Air Force.

ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks construction standard, known as "one-plus-one," established by OSD. All known alternative options were considered during the development of this project. No other option could meet the mission

| 10. Description of Proposed Construction: Demolition of existing | exterior wall, construction of two-story addition to existing simulator | facility with high bay area, sloped roof, concrete foundation and floor | slab, exterior masonry walls with brick veneer to match existing facility, | and necessary support. Demolish two facilities in the way of construction | (1,600SM).

Air Conditioning: 88 KW.

11. REQUIREMENT: 2,115 SM ADEQUATE: 1,690 SM SUBSTANDARD: 0

PROJECT: Add to a C-17 flight simulator facility. (New Mission)

REQUIREMENT: An addition is required to provide an adequate facility to house a full-motion (six axes) flight simulator for the C-17 aircrews in support of the beddown of the remaining 14 C-17 aircraft scheduled to arrive at Charleston, bringing the total number of aircraft on base to 48. This simulator will provide proficiency and effective mission procedures training. It is essential for providing hazardous emergency training that cannot otherwise be conducted. Required areas include a simulator bay, computer room, briefing room, and an associated hydraulic area. Facility construction is required in FY01 to support the FY02 equipment delivery date.

CURRENT SITUATION: This project is the second phase of a two-phase program to construct a flight simulator addition for the beddown of the C-17 aircraft at this installation. The first phase provided two bays and was approved in the FY89 MILCON program to support initial delivery of the new aircraft. This addition will provide the final bay needed to support C-17 aircrew training requirements.

IMPACT IF NOT PROVIDED: A complete beddown of the C-17 aircraft cannot be

10. Description of Proposed Construction: Metal frame building, concrete floor and foundation, prefinished masonry exterior panels, and standing seam metal roof; parking, access road, sidewalks, fencing, and utilities will be included. Space will be provided for command, evaluation and standardization, production, training, forecast, and communication divisions. Disposal of 1330 SM in interim facilities.

| Air Conditioning: 122 KW.

11. REQUIREMENT: 1,366 SM ADEQUATE: 0 SUBSTANDARD: 0

PROJECT: Construct an operations facility for an Operational Weather Squadron. (New Mission)

REQUIREMENT: Provide adequate facilities to support the beddown of a weather squadron as part of the Air Force direction weather mission. Space will be provided for command, evaluation and standardization, production, training, forecast, and communication divisions. This squadron will provide theater/regional weather forecast guidance for the planning and execution of Air Force and Army operations within a particular theater or CONUS region 24 hours a day, seven days a week. This squadron will produce drop zone, range, and air refueling forecasts, fine-scale target forecasts, weather warnings, terminal forecasts, and transient aircrew briefings.

CURRENT SITUATION: This facility will provide for consolidation of weather personnel from Army and Air Force installations for theater/regional weather forecasting. The full complement of personnel and equipment to achieve an initial operational capability arrived in 1998. Full operational capability for this 148 person squadron is FY 2001. There are no other facilities on the installation that provide

sufficient space for this new mission requirement.

IMPACT IF NOT PROVIDED: This squadron is vital in providing weather data for the commander of US Air Forces. Without the required facilities, this unit will be unable to accomplish its mission.

ADDITIONAL: This project meets the criteria and scope specified in Air Force Handbook 32-1084, "Facility Requirements". A preliminary analysis of reasonable options for accomplishing this project (status quo, renovation, upgrade/removal, leasing, new construction) was done. New construction is the only option that could meet mission requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared. Base Civil Engineer: Lt Col Edward H Henson. Phone: 803-668-3413.

- | 10. Description of Proposed Construction: Acquisition of land for | emitter sites and construction of emitter facilities with concrete floors, | walls and standing seam metal roofs. Work includes gravel parking pads, | electricity, perimeter fence, gravel access roads and water and sewer | lines to emitter sites. Includes all sitework and necessary support.
- 11. REQUIREMENT: As required.

PROJECT: Construct realistic bomber training initiative. (New Mission)
REQUIREMENT: Provide realistic, simultaneous, integrated training using interrelated training assets that offer terrain and airspace to simulate the variety of conditions anticipated for combat missions for B-1 and B-52 aircrews. These training assets in the proximity of Barksdale and Dyess Air Force Bases are required to maximize high-value training time and reduce transit time that yields low training value.

CURRENT SITUATION: Currently, bomber aircraft from Dyess and Barksdale | fly to training range sites located over large multi-state regions | requiring long sortie durations. Costly flying hours are expended while | transiting to and from these ranges. Non-essential operational flying | hours per year are estimated at 300 for B-52's from Barksdale Air Force | Base and 200 for B-1's from Dyess Air Force Base. This project will | eliminate those non-essential flying hours and allow the training of an | additional twenty-two aircrews per year. Aircrews will be able to | efficiently train on a range designed for effective and realistic bomber | missions.

| IMPACT IF NOT PROVIDED: The Air Force would not be able to train and | produce replacement aircrews in sufficient numbers to man B-1 and B-52 | weapon systems in the future. Aircrews will continue to receive | inadequate training scenarios and continue to fly additional hours to

11. REQUIREMENT: 2,388 RM ADEQUATE: 806 RM SUBSTANDARD: 83 RM

| PROJECT: Construct a dormitory. (Current Mission)
| REQUIREMENT: A major Air Force objective is to provide unaccompanied | enlisted personnel with on-base housing conducive to their proper rest, | relaxation and personal well-being. Properly designed and furnished | quarters providing some degree of individual privacy are essential to | successful accomplishment of the increasingly complicated and critical | jobs Air Force personnel must perform. This project is in accordance with | the Air Force Dormitory Plan.

CURRENT SITUATION: As verified by the Air Force Dormitory Master Plan, the base has insufficient facilities to adequately accommodate permanent party unaccompanied enlisted personnel required to live on-base per Air Force policy.

| IMPACT IF NOT PROVIDED: Adequate living quarters will continue to be unavailable resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. Lowered morale will contribute to retention difficulties for the Air Force.

ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks construction standard known as "one-plus-one" established

- 10. Description of Proposed Construction: Multi-bay structure with concrete floor slab, foundation, and structural steel frame, including aircraft access pavement, fire suppression system and all necessary support. Includes support equipment preparation and paint mixing room. Air Conditioning: 400 KW.
- 11. REQUIREMENT: 9,012 SM ADEQUATE: 2,112 SM SUBSTANDARD: 0

  PROJECT: Construct a C-130 corrosion control facility. (Current Mission)

  REQUIREMENT: An adequately sized, environmentally safe facility is required to perform depot-level corrosion control on C-130 aircraft. This facility must support the periodic depot maintenance (PDM) as well as the annual recurring drop-in C-130 aircraft requirements.

CURRENT SITUATION: C-130 aircraft corrosion control capacity at Hill AFB is inadequate to accommodate the current and projected work load. Hill AFB has been forced to contract out C-130 aircraft corrosion control work because the existing facility is used 3 shifts-per-day, 7 days a week. Contracting out work requires added preparation and transport time thus decreasing the time aircraft are available to support the C-130 mission. In FY97 with a workload of 48 PDM and 24 drop-in aircraft, eleven aircraft had to be contracted out for stripping and painting at an additional cost of \$350,000. Projected work load will require a total of 35 aircraft to be contracted out at a cost of \$1,225,000 per year. No residual capacity is available for scheduled maintenance of the facility or the associated corrosion control equipment.

| IMPACT IF NOT PROVIDED: There will continue to be a shortfall in C-130 | corrosion control capacity at Hill AFB. Corrosion control work will | continue to be contracted out, cost for depot-level work will increase,

and additional time delays will occur in returning mission ready aircraft to flying status.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." An economic analysis has been prepared comparing the alternatives of new construction, outsourcing, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. The requirement for this project was validated by the Joint Service Depot Maintenance Industrial Military Construction Review on 20 May 98. Base Civil Engineer: Col Per Korslund, (801) 777-3071. C-130 Corrosion Control Facility: 6900SM = 74,244SF.

10. Description of Proposed Construction: Three-story dormitory with pile foundation and floor slabs, masonry walls, and sloped roofs.

Includes room-bath/kitchen-room modules, laundry rooms, storage, lounge areas, site preparation, and all other supporting facilities. Also includes upgrade of existing infrastructure (electrical, water, sewage, and storm drainage) to support this and follow-on deficit dormitories.

Air Conditioning: 300 KW. Grade Mix: 96 E1-E4.

| 11. REQUIREMENT: 1,427 RM ADEQUATE: 760 RM SUBSTANDARD: 0 | PROJECT: Construct a dormitory. (Current Mission)

REQUIREMENT: A major Air Force objective is to provides unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation, and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. This project is an accordance with the lair Force Dormitory Master Plan.

CURRENT SITUATION: As verified by the Air Force Dormitory Master Plan, the base has insufficient facilities to adequately accomodate permanent party unaccompanied enlisted personnel required to live on-base per Air Force policy. The current dormitory area is adjacent to the dining facility, base recreation facilities, and was the site of World War II barracks which have been demolished. This dormitory and the follow-on dormitories require upgrades to the infrastructure for area development. This will require an increase in electrical load, water, and relocation of a sewage lift station, and the construction of a storm water retention pond. The current site is crossed by two roads, one of which will be

demolished, and the second rerouted around the dormitory area. upgrades will provide a modern dormitory area. IMPACT IF NOT PROVIDED: Adequate living quarters will continue to be unavailable, resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. Lowered morale will contribute to retention difficulties for the Air Force. ADDITIONAL: This project meets the criteria/scope specified in the new uniform barracks construction standard known as "one-plus-one," established by OSD. All known alternative options were considered during the development of this project. No other option could meet the mission requirements; therefore, no economic analysis was needed or performed. A Certificate of Exception has been prepared. FY 1998 Unaccompanied Housing RPM Conducted: \$406K. FY 1999 Unaccompanied Housing RPM Conducted: \$1,021K. Future Unaccompanied Housing RPM requirements (estimated): FY00:\$424K; FY01: \$433K; FY02: \$443K; FY03: \$453K. Base Civil Engineer: Lt Col Ed Keith (757)-764-2025 Dormitory: 3,168 SM = 34,100 SF

| 10. Description of Proposed Construction: Add/alter nose dock 1164: | Reinforced concrete foundation and floor slab. Steel frame with metal | panel siding and roof. Extend fire suppression/detection, electrical, and | mechanical systems and necessary support. Alter corrosion control hangar | 1178: Includes altering a corrugated steel door by installing a "soft | closure" opening and alter fire suppression system. | Air Conditioning: 7 KW.

11. REQUIREMENT: As required.

PROJECT: C-17 add/alter nose docks. (New Mission)

<u>REQUIREMENT</u>: Adequately sized and configured maintenance facilities are required to support the beddown of 48 C-17 aircraft at McChord AFB. Covered space is required for aircraft jacking, inspection, repair and maintenance of C-17 aircraft.

CURRENT SITUATION: C-17 aircraft and support equipment required to work on the aircraft cannot physically fit into the existing C-141 nose dock and a C-141 corrosion control hangar. The existing nose dock is too shallow to accommodate the larger C-17 aircraft. A 700 square meter addition is required to allow the doors to be closed behind the aircraft wings. The overhead structural trusses of the existing C-141 corrosion control hangar are not high enough to accommodate the "T-Tail" of the C-17 and it is not cost effective to raise them. The doors of the facility must be modified to provide a "soft closure" around the C-17 fuselage.

IMPACT IF NOT PROVIDED: Adequate aircraft maintenance operations cannot be performed on the C-17 aircraft. It will not be possible to meet the aircraft utilization rates of the 48 assigned C-17 aircraft unless this project is accomplished.

10. Description of Proposed Construction: Two-story facility with concrete foundation, masonry walls, structural steel frame, sloping roof system, fire protection system, utilities, elevator, site improvements and parking, and necessary support.

Air Conditioning: 65 KW.

| 11. REQUIREMENT: 13,666 SM ADEQUATE: 10,366 SM SUBSTANDARD: 1,429 SM | PROJECT: Construct a squadron operations/aircraft maintenance unit | facility. (New Mission)

REQUIREMENT: This project is required to consolidate Air Mobility Command operational squadrons by collocating aircraft operators with aircraft maintainers. This is the last of four Sq Ops/AMU facilities required to house the C-17/C-141 squadrons. Squadrons will operate a combination of 48 C-17/C-141s until all 48 C-17s arrive by FY04. The consolidation relocates flyers and maintainers out of undersized, interim, and dispersed facilities into a functional and adequately sized structure. Space is required for Sq Ops/AMU management support, briefing/debriefing, flight planning, training and testing, tool rooms, standardization/evaluation, locker rooms, flying/ground safety, bench stock, mobility office, scheduling, and a technical order library. These efficiencies are essential to maintain AMC mission tasking rates.

CURRENT SITUATION: There are no adequate facilities to support the fourth consolidated Sq Ops/AMU operations at McChord AFB. Currently, there are three operations and three maintenance facilities in use. These facilities are too small to house a fourth Sq Ops/AMU. The operations personnel are working in an overcrowded, improperly configured facilities far from the squadron maintenance (AMU) personnel on the flightline. The

supporting AMU occupies an overcrowded, improperly configured, and

temporary modular facility approved for use only until the completion of this project. The associated squadron life support function is shoehorned in with two other squadron life support elements in a single overcrowded facility at a third location on base. This physical separation creates fragmented lines of communications and authority. IMPACT IF NOT PROVIDED: Operations, maintenance, and support personnel will remain in separate, undersized, and interim buildings. Essential squadron operations and logistic functions will continue to require extensive work-arounds that will degrade mission performance. Temporary modular facilities marginally support the flightline maintenance unit and experience extensive wear and tear and associated maintenance costs. ADDITIONAL: This project does meet the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." A preliminary analysis of reasonable options for accomplishing this project was done. It indicates new construction is the only option that will meet operational requirements. Because of this, a full economic analysis was not performed. A certificate of exception has been prepared. BASE CIVIL ENGINEER: Lt Col Bryan Bodner, (253) 984-2294. Squadron Operations/AMU Facility: 3,300 SM = 35,521 SF

| 10. Description of Proposed Construction: Reinforced concrete footings, | grade beams, floor slabs, steel frame, masonry/prefinished metal walls, | prefinished steel roof, sensitive compartmented information facility | (SCIF) area, fencing, intrusion detection systems, paved approach and | parking for approximately 60 military vehicles, and all necessary support. | Air Conditioning: 450 KW.

11. REQUIREMENT: 5,110 SM ADEQUATE: 0 SUBSTANDARD: 0

PROJECT: Construct a command and control support facility. (New Mission)

REQUIREMENT: This facility is required to support the permanent beddown

of the 4th Command and Control Squadron (CACS) and continued readiness of

the Mobile Consolidated Command System (MCCS) at FE Warren AFB. The 4th

CACS and MCCS provide sustainment, mobility, and operations and

maintenance in support of the Joint Chief of Staff directed US Space

Command Mobile Command and Control Center. This mission was relocated

from its temporary location at Peterson AFB to FE Warren AFB due to

strategic safegard requirements. Maintenance, operations, and training

areas are needed to provide in-garrison support for this survivable mobile

command center. A secure facility is also needed to conduct testing,

training, and exercises. The Wyoming Air National Guard will provide unit

personnel as part of the total Air Force concept.

CURRENT SITUATION: No adequate facilities exist at FE Warren AFB or the Cheyenne, Wyoming Air National Guard to permanently support this mission. In order to disperse strategic command and control assets, the MCCS was relocated to FE Warren AFB during the summer of 1999 in an existing temporary facility that provides only 2,230 square meters which is 40% of the required scope. This facility is located approximately 300 feet from

the base boundary and lacks security fencing, cameras, clear zones, alarms, and proper entry control. Operational security of this classified mission is degraded due to close proximity to the base boundary and off-base residences. In addition, proper physical security for the priority asset is a concern.

IMPACT IF NOT PROVIDED: The 4th CACS will not have adequate facilities to conduct their mission. Workarounds and waivers will continue to degrade the security and maintenance of this mission. Testing, training, and exercises will continue to be negatively impacted.

ADDITIONAL: There is no criteria/scope for this project in Air Force Handbook 32-1084, "Facility Requirements" or in Part II of Military Handbook 1190, "Facility Planning and Design Guide." Space requirements are based on a study done by an Architectural Engineering firm. Base Civil Engineer: Lt Col Carlos Cruz-Gonzalez, (307) 775-3600. Operations and Administrative Area: 2,820SM = 30,343SF; Mobile Equipment Operations Area: 2,290SM = 24,640.

| 10. Description of Proposed Construction: Reinforced concrete foundation | and floor slab, concrete masonry walls, sloped steel roof deck. Includes | electronics laboratory, vehicle and equipment staging, van configuration | support, training and office areas, asphalt pavement, vehicle electrical | hookups, and all necessary support. Demolish one facility (170 SM). | Air Conditioning: 610 KW.

11. REQUIREMENT: 9,884 SM ADEQUATE: 0 SUBSTANDARD: 8,566 SM

PROJECT: Construct a minuteman three (MM III) missile service complex.

(Current Mission)

REQUIREMENT: This facility will provide a modern, efficient space to perform missile component repair, technical training, and administrative functions. START Treaties I and II require the number of ICBM multiple re-entry vehicles (MRVs) be reduced and the missiles deactivated. As a result, missile service operations will increase significantly over the next several years because of the requirement to convert warheads to single re-entry vehicles. The reduction in the ICBM arsenal will require missiles remaining on alert be provided additional maintenance to maintain an effective strategic deterrent.

CURRENT SITUATION: Currently, the MMIII missile service functions are performed in five separate buildings. Three of these buildings were constructed in 1909 and are on the National Historic Register. Altering these buildings to consolidate and improve efficiency is not physically possible. The HVAC systems are worn out and inadequate. Lighting in the buildings, especially in the service areas is poor and electrical loverloads cause frequent circuit failure. Antiquated and worn out plumbing often clogs and needs to be replaced. Floor drains in the

4. PROJECT TI	TLE 5	. PROJECT 1	NUMBER
MMIII MISSILE	SERVICE COMPLEX	GHLN97300	01

equipment service bays are not equipped with pollution prevention devices which is a violation of local board of public utilities pretreatment regulations. Vehicle and equipment engine exhaust removal systems are inadequate and under powered. During maintenance operations, thick diesel exhaust is visible in service bays if bay doors are closed. The lack of fire suppression systems, alarm pull stations, fire barriers, and the use of non-fire rated materials has resulted in Fire Safety Deficiency violations in each of the existing structures. The layout of the existing shops is inefficient for the maintenance teams. On a daily basis, all personnel must make stops at three different buildings to pick up supplies, equipment, technical orders and other data prior to traveling to the missile sites. Large electrical cables used to supply power to equipment in the electronics laboratory are exposed and present a safety hazard.

IMPACT IF NOT PROVIDED: Personnel will be forced to continue working in inadequate facilities with safety and fire code deficiencies. Additional manhours are necessary to satisfy mission requirements due to poor functional layout of the individual buildings, as well as having similar functions physically separated. Vital and costly mission essential equipment may be damaged due to additional handling and/or servicing in inadequate service shop areas.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." An economic analysis has been prepared comparing the alternatives of new construction, revitalization, and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Base Civil Engineer: Lt Col Carlos Cruz-Gonzalez, (307) 775-3600. Missile Service Shops: 6,936SM = 174,631SF. Administrative: 2,064SM = 22,208SF.

- |10. Description of Proposed Construction: Reinforced concrete munitions |storage igloos, including security measures and all necessary support.
- 11. REQUIREMENT: 876 SM ADEQUATE: 0 SUBSTANDARD: 0

  PROJECT: Construct munitions storage igloos. (New Mission)

  REQUIREMENT: Adequate storage facilities are required for prepositioning precision-guided munitions to support the bomber Air Expeditionary Force (AEF). These assets must be stored and maintained ready for use on minimal notice in order to support theater objectives requiring bomber AEF employment.

CURRENT SITUATION: There are no adequate facilities available for long-term storage of precision-guided munitions. The existing USAF munitions storage site has 36 open-air, bermed magazines, many of them with badly corroded structures due to the salt air environment. Secure, weatherproof facilities are essential for execution of the AEF operating concept.

IMPACT IF NOT PROVIDED: Adequate facilities will not be available for prepositioning of the munitions necessary for employment of the AEF. Without adequate storage facilities, increased transportation demands will impede US capability to successfully execute contingency plans requiring AEF employment.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." All known alternatives were considered during development of this project. No other option meets the mission requirements. Therefore, no economic analysis was needed or performed. A Certificate of Exception has been prepared. PUBLIC WORKS OFFICER: Cdr Macias,011-246-370-4500. Munitions Storage Igloos: 876 SM = 9,429 SF

- | 10. Description of Proposed Construction: Three-story facility with | reinforced concrete foundation and floor slabs, masonry walls and pitched | roof. Includes room-bath/kitchen-room modules, laundry room, storage | room, lounge areas, all supporting utilities, and site improvements to | include parking. Force protection measures include laminated glass, | stand-off construction, reinforced walls, and exterior lighting. | Air Conditioning: 150 KW. Grade Mix: 102 E1-E4.
- | 11. REQUIREMENT: 1,201 RM ADEQUATE: 404 RM SUBSTANDARD: 0
  | PROJECT: Construct a dormitory. (Current Mission)
  | REQUIREMENT: A major Air Force objective provides unaccompanied enlisted | personnel with housing conducive to their proper rest, relaxation and

personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated jobs these people must perform. As an overseas location with a sensitive mission, the dormitory must also be constructed to deter terrorist activity and protect occupants from terrorist attack. This project is in accordance with the Air Force Dormitory Master Plan.

CURRENT SITUATION: As verified by the Air Force Dormitory Master Plan, the base has insufficient facilities to adequately accommodate permanent party unaccompanied enlisted personnel required to live on-base per Air Force policy.

IMPACT IF NOT PROVIDED: Adequate living quarters will continue to be unavailable resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. Lowered morale will contribute to retention difficulties for the Air Force.

10. Description of Proposed Construction: Construct elevated water storage tank and presedimentation basin in existing plant complex, replace existing mains and install new mains in aircraft parking areas and along perimeter road. Antiterrorism force protection measures in accordance with the USAF Installation Force Protection Guide. All necessary support.

11. REQUIREMENT: As required.

PROJECT: Upgrade water distribution system. (Current Mission) REQUIREMENT: A reliable and survivable water supply is essential to support the mission of this warfighting base. Additional water mains and hydrants are necessary to provide fire protection for parked aircraft. Additional water storage is required to provide adequate storage capacity and pressure for firefighting. A new supply line and presedimentation basin are needed to improve reliability, quantity, and quality of treated water available to meet mission requirements. Antiterrorism force protection measures are based on a joint staff-directed vulnerability assessment.

CURRENT SITUATION: Existing water capacity is well below needed quantities for normal use plus emergency contingency requirements. There are no hydrants in the hardened aircraft parking areas for firefighting. IMPACT IF NOT PROVIDED: Water supply and distribution deficiencies will continue to compromise safety, placing personnel and aircraft at risk and jeopardizing mission accomplishment.

ADDITIONAL: This project meets scope/criteria specified in Air Force Handbook 32-1084, "Facility Requirements." This project was submitted unsuccessfully for host nation funding. Only \$30M is available annually for host nation funded construction. A host-nation funded project programmed for CY99 will replace existing deteriorated water mains.

- 10. Description of Proposed Construction: A four-story facility with reinforced concrete foundation and floor slabs, masonry walls and roof. Includes room-bath/kitchen-room modules, laundries, storage and lounge area and all supporting facilities. Antiterrorism force protection measures in accordance with the USAF Installation Force Protection Guide. Air Conditioning: 400 KW. Grade Mix: 156 E1-E4.
- | 11. REQUIREMENT: 5,114 RM ADEQUATE: 3,856 RM SUBSTANDARD: 0 | PROJECT: Construct a dormitory (Current Mission)

REQUIREMENT: A major Air Force objective is to provide unaccompanied enlisted personnel with housing conducive to their proper rest, relaxation and personal well-being. Properly designed and furnished quarters providing some degree of individual privacy are essential to the successful accomplishment of the increasingly complicated and important jobs these people must perform. This project is in accordance with the Air Force Dormitory Master Plan. Antiterrorism force protection requirements are based on a joint staff-directed installation vulnerability assessment.

CURRENT SITUATION: As verified by the Air Force Dormitory Master Plan, the The base has insufficient facilities to adequately accommodate permanent party unaccompanied enlisted personnel required to live on-base per Air Force policy.

IMPACT IF NOT PROVIDED: Adequate living quarters will continue to be unavailable resulting in degradation of morale, productivity, and career satisfaction for unaccompanied enlisted personnel. Low morale will contribute to retention difficulties for the Air Force.

ADDITIONAL: This project meets the criteria/scope specified in the new

10. Description of Proposed Construction: Replace distribution lines, valves and hydrants, extend mains to north end of runway with new valves, hydrants, and connections. Add to and alter the existing water treatment plant, including addition of automated water treatment controls.

| Antiterrorism measures are in accordance with the USAF Installation Force | Protection Guide.

11. REQUIREMENT: As required.

PROJECT: Upgrade water distribution system. (Current Mission)

REQUIREMENT: A reliable, survivable water supply is essential to support the mission of this warfighting base. The system extension to the north end of the runway is needed to provide firefighting capability to Patriot missile sites. Antiterrorism requirements are based on a joint staff-directed installation vulnerability assessment.

CURRENT SITUATION: The existing system is 43 years old and does not have adequate capacity to meet current firefighting flow requirements. Patriot missile sites north of the runway have no water for firefighting, equipment, or drinking. Pipes weakened by age and corrosion cannot withstand incoming water pressures, fail frequently, and cause lengthy outages. An insufficient number of isolation valves causes large areas of the base to lose service during repairs.

IMPACT IF NOT PROVIDED: Fire protection will continue to be compromised in peacetime and remain inadequate for warfighting, placing personnel and assets at risk and jeopardizing mission accomplishment.

ADDITIONAL: This project meets the scope/criteria specified in Air Force Handbook 32-1084, "Facility Requirements." A preliminary analysis of options for satisfying this requirement was completed. Only one option satisfies mission requirements. Therefore, a full economic analysis was

10. Description of Proposed Construction: All architectural, civil, mechanical and electrical work necessary to construct flightline maintenance, forward supply warehouse, POL operations, filter shelter, truck refuel facility, fleet post office, and aero club hangar. Masonry walls, metal roof. Includes concrete foundations and all supporting utilities, pavements, and site prep.

11. REQUIREMENT: As required.

PROJECT: Construct various facilities. (New Mission)

REQUIREMENT: This project is required to replace 7 facilities which are located on the site of aircraft parking planned for construction in FY02 and FY03. This project supports a two-phase plan to construct 16 aircraft parking spots with hydrant refueling. The Air Mobility Support Squadron flightline maintenance facility and the forward supply location warehouse will be relocated adjacent to the flightline and include parking. The POL operations facility and ancillary structures, the truck refuel facility and the filter shelter will include provisions for a roadway and truck parking. The fleet post office includes parking. The aero club hangar will replace existing hangar space to be demolished in the second phase of the apron construction. These 7 facilities must be complete prior to demolition of the existing facilities.

CURRENT SITUATION: Rota's 5 widebody aircraft parking spaces cannot meet projected mission demands for strategic mobility through the Southern European region. An interservice study of peacetime and contingency plans determined a need for 16 widebody (2 for dangerous cargo) parking spots with hydrant refueling. Additionally, current aircraft parking violates airfield safety criteria and operations are under a waiver. The expansion of the apron to accommodate the parking spots requires the demolition of 7

ENHANCED ROTA, VARIOUS FACILITIES	ASKE013001

#### facilities.

IMPACT IF NOT PROVIDED: The existing parking apron at Rota will be insufficient to handle projected peacetime aircraft sorties (10 per day) or contingency aircraft sorties (up to 40 a day). Aircraft will be towed and refueled by truck, resulting in delayed missions and increased sortie generation time. Widebody aircraft will continue to operate under waivers for runway and taxiway safety clearance zones.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." A preliminary analysis of reasonable options for accomplishing this project was done. It indicates that new construction is the only option that will meet operational demands. Because of this, a full economic analysis was not performed. A certificate of exception was prepared. The European En-Route Steering Committee, jointly chaired by EUCOM/J4 and TRANSCOM/J5, validated this project. This project is not currently eligible for NATO funding, but will be submitted to NATO with a prefinancing statement. Director of Public Works: CMDR Michael Doyle 011-34-956-82-2343. 10. Description of Proposed Construction: Construct a fire training facility to include: a double lined and environmentally-acceptable fire training pit, aircraft mockup, tank for propane gas, pumps, piping, and storage system for fuel and water, lighting, fencing, roads, and all necessary support.

11. REQUIREMENT: 1 LS ADEQUATE: 0 SUBSTANDARD: 1 LS

PROJECT: Construct a fire training facility. (Current Mission)

REQUIREMENT: This is a Level I environmental compliance requirement. A

live fire training facility is required to simulate aircraft fires for

fire training in accordance with Air Force policy. Air Force policy

requires an environmentally acceptable fire training facility at

installations with a flying mission. The policy further prohibits use of

existing fire training facilities which do not provide protection against

contamination of land, water, and air resources. Acceptable fire training

facilities include a double-lined impermeable fire pit with a leak

detection system under the burn area and a water conservation system to

prevent contamination of land and ground water. Live fire training is an

Air Force and Federal Aviation Administration (FAA) requirement for fire

fighters to maintain a high level of proficiency.

CURRENT SITUATION: The existing facility has been closed since 1993; thus live fire training cannot currently be conducted. Only minimal fire training is conducted using existing mock up structures with no fire or heat capability. This training does not fulfill Air Force or FAA requirements. There are no other environmentally approved live fire training facilities in the local area. Long-term off-base training is not acceptable because flying and support missions at Incirlik require full firefighting capability to respond to base emergencies.

	INCIRLIK AIR	BASE, TURKEY		
	4. PROJECT TI	TLE	5. PI	ROJECT NUMBER
	FIRE TRAINING	FACILITY	L	JYC003005

IMPACT IF NOT PROVIDED: Fire fighters will not be able to meet Air Force and FAA quarterly training requirements to remain proficient in aircraft crash fire fighting and rescue techniques. The safety of both the firefighters and aircraft accident victims will continue to be compromised by lack of proper training.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1024, "Facility Requirements." This project is not eligible for NATO funding because fire fighting training is a user-nation responsibility. Base Civil Engineer: Maj Glenn Pappas 011-90-332-346-3657

10. Descript	tion c	of Proposed C	.onstru	ccion:	P	TOAT	ue a	Tump	sum at	"OUTL TOT

10. Description of Proposed Construction: Provide a lump sum amount for unspecified construction projects not otherwise authorized by law. Minor construction projects costing less than these limits are authorized to be funded from the operations and maintenance appropriation. Includes construction, alteration, or conversion of permanent or temporary facilities.

#### 11. REQUIREMENT: As required.

REQUIREMENT: Minor construction projects authorized by 10 U. S. Code 2805 are military construction projects with an estimated funded cost between \$500,000 and \$1,500,000; however projects with an estimated funded cost of \$1,000,000 to \$3,000,000 may be funded under this authority when specifically planned to correct a life, health or safety deficiency. This package provides a means of accomplishing urgent projects that are not identified but which are anticipated to arise during FY01. Included would be projects to support new mission requirements, support of new equipment and concepts, and other essential support to Air Force missions and functions that could not wait until availability of FY02 Military Construction Program funds.

- |10. Description of Proposed Construction: One-bay structure with |concrete slab on pier and grade beam, steel frame, masonry walls, roof, |fire wall, fire suppression system, and all other necessary support. |Air Conditioning: 35 KW.
- 11. REQUIREMENT: 29,622 SM ADEQUATE: 24,557 SM SUBSTANDARD: 3,885 SM PROJECT: Construct a depot corrosion control strip facility. (Current Mission)

REQUIREMENT: An environmentally safe paint stripping facility is required to perform corrosion control for all presently assigned aircraft (B-1, B-52, KC-135, E-3 etc.). The facility must incorporate the most modern paint stripping technologies and reduce the use of volatile organic componds (VOCs) as stripping agents.

CURRENT SITUATION: Implementation of the Clean Air Act Amendment of 1990 and the National Emission Standards for Hazardous Air Pollutants (NESHAP) of 1998, requires significant reduction in VOC emissions from paint stripping. Plans are underway to reduce the VOC emissions with a new manual dry media blast technology. The existing facilities are not large enough to accommodate E-3 and B-52 aircraft utilizing the new dry blast system. Currently E-3 aircraft are stripped in an existing paint bay reducing the capacity needed to support painting of the assigned aircraft. IMPACT IF NOT PROVIDED: A shortfall in depot aircraft strip capabilities will exist at Tinker AFB. Critical depot aircraft corrosion control will be deferred or contracted to an outside source at greater expense. The new strip technology must be incorporated into the corrosion control process to ensure compliance with the NESHAP and continue to meet customer needs.

ADDITIONAL: This project meets the criteria/scope specified in Air Force Handbook 32-1084, "Facility Requirements." An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing, contracting and status quo alternatives. Based on the net present values and benefits of respective alternatives, new construction was found to be the most cost efficient over the life of the project. The requirement for this project was validated by the Joint Service Depot Maintenance Industrial Military Construction Review on 20 May 98. Base Civil Engineer: Lt Col Mohsen Parhizkar, (405) 734-3451. Depot Corrosion Control Strip Facility: 5065SM = 54,500SF.

- 10. Description of Proposed Construction: Multi-bay structure with concrete floor slab, foundation, and structural steel frame, including aircraft access pavement, fire suppression system and all necessary support. Includes support equipment preparation and paint mixing room. Air Conditioning: 400 KW.
- 11. REQUIREMENT: 9,012 SM ADEQUATE: 2,112 SM SUBSTANDARD: 0

  PROJECT: Construct a C-130 corrosion control facility. (Current Mission)

  REQUIREMENT: An adequately sized, environmentally safe facility is

  required to perform depot-level corrosion control on C-130 aircraft. This
  facility must support the periodic depot maintenance (PDM) as well as the
  annual recurring drop-in C-130 aircraft requirements.

CURRENT SITUATION: C-130 aircraft corrosion control capacity at Hill AFB is inadequate to accommodate the current and projected work load. Hill AFB has been forced to contract out C-130 aircraft corrosion control work because the existing facility is used 3 shifts-per-day, 7 days a week. Contracting out work requires added preparation and transport time thus decreasing the time aircraft are available to support the C-130 mission. In FY97 with a workload of 48 PDM and 24 drop-in aircraft, eleven aircraft had to be contracted out for stripping and painting at an additional cost of \$350,000. Projected work load will require a total of 35 aircraft to be contracted out at a cost of \$1,225,000 per year. No residual capacity is available for scheduled maintenance of the facility or the associated corrosion control equipment.

| IMPACT IF NOT PROVIDED: There will continue to be a shortfall in C-130 | corrosion control capacity at Hill AFB. Corrosion control work will | continue to be contracted out, cost for depot-level work will increase,

#### NARRATIVE SUMMARY

This Military Family Housing request reflects the Department of Defense goal to "revitalize, divest through privatization, or demolish inadequate housing by or before 2010." The Air Force created the Air Force Family Housing Master Plan (AF FHMP) as the "roadmap" to meet this DOD goal. The Secretary of the Air Force and the Chief of Staff endorsed the following statement in the recently approved plan:

As we look forward to the 21<sup>st</sup> Century, our highest enduring priority is to recruit and retain the finest men and women for our Air Force. Achieving this priority is paramount to the Air Force's military capability, today and tomorrow. Investments in Quality of Life create the living environment our people need and deserve to successfully accomplish their mission. Providing safe and adequate housing, especially for our military families, enhances retention and readiness, for while we recruit individuals, we retain families. The family housing master plan lays the foundation for our investment in Air Force military family housing and directly supports our airmen who are the future of the world's most respected air and space force.

The AF FHMP provides a balanced, requirements based strategy that integrates and prioritizes traditional construction and operations and maintenance, with a measured approach to privatization into a single "roadmap." The AF FHMP recognizes that we rely on the local community to provide 60 percent of our military family housing needs. When local community housing is unavailable, inadequate, or demand for base housing is high due to economic factors, we construct, or repair and maintain existing military family housing to modern-day, industry standards. Also, where possible and fiscally appropriate, we attempt to lease adequate housing for our families.

Consistent with AF FHMP priorities, this budget provides a balanced program for construction, and operations and maintenance of our housing inventory. We are concentrating on homes in worst condition by improving or replacing to contemporary "whole-house" standards, where economically justifiable. These housing standards are established by DOD guidance and comparable to industry housing standards. We continue to propose projects that provide new support facilities or necessary community and infrastructure upgrades at installations with the greatest need.

The operations, day-to-day maintenance and leasing accounts predominantly support "must pay" requirements. These costs include service contracts, lease contracts, utilities, and essential maintenance to keep "good units good" and those units requiring essential repairs from deteriorating into a state of inadequacy. The maintenance account also reflects AF FHMP priorities and attempts to arrest growth of our deferred housing maintenance and repair requirements within fiscal constraints. Unfortunately we have not eliminated our deferred maintenance and repair backlog. In 1999 we projected 61,000 inadequate units. Yet, after two

February 2000 Page No. 271

years of strong congressional support of military family housing programs, a recent, more accurate analysis incorporated into the Family Housing Master Plan indicated 65,000 housing units needed revitalization. Under existing agreements, it is expected host nations will revitalize about 3,000 units leaving 62,000 units for the Air Force to address. Although this change in requirements is attributable to the detailed methodology used by architectural and engineering firms to assess AF housing during the AF FHMP process, it may also indicate the results of asset deterioration from deferring maintenance and repair and an existing backlog of requirements.

Because the Air Force expects Congress to extend the authorities for privatization of military family housing beyond February 2001, the Air Force plans to continue a measured approach to private sector-funded housing revitalization where projected life-cycle costs are similar or better than traditional military construction and operations and maintenance life-cycle costs. The AF FHMP proposes 24 additional housing privatization initiatives between 2001 and 2010. Starting in 2001, we propose to privatize 6,921 housing units located at six bases: Moody, Offutt, Little Rock, Hill, Vandenberg and Charleston Air Force Bases with a total budgeted cost of \$45.7M. Should the privatization authorities not be extended past February 2001, the Air Force will use the funds requested for privatization to accomplish traditional military construction improvement projects for 390 housing units at these locations.

We believe this funding profile represents a well-balanced program that is based on a <u>fact-based</u> and <u>senior leadership</u> approved Family Housing Master Plan. We respectfully request full support for the Air Force family housing needs presented herein.

#### FY 2001 Authorization Language

#### SEC. 2302: FAMILY HOUSING

(a) CONSTRUCTION AND ACQUISITION. - Using amounts appropriated pursuant to the authorization of appropriations in section 2304(a)(5)(A)), the Secretary of the Air Force may construct or acquire family housing units (including land acquisition) at the installations, for the purposes, and in the amounts set forth in the following table:

<u>STATE</u>	INSTALLATION	<u>PURPOSE</u>	<u>AMOUNT</u>
District of Columbia	Bolling AFB	136 Units	\$ 17.137.000
North Dakota	Cavalier AFS	2 Units	\$ 443.000
	Minot AFB	134 Units	\$19.097.000
		Total	\$36.677.000

(b) PLANNING AND DESIGN. - Using amounts appropriated pursuant to the authorization of appropriations in section 2304(a)(5)(A), the Secretary of the Air Force may carry out architectural and engineering services and construction design activities with respect to the construction or improvement of military family housing units in an amount not to exceed \$12,760.000.

### SEC. 2303. IMPROVEMENT TO MILITARY FAMILY HOUSING UNITS

Subject to section 2825 of Title 10. United States Code. and using amounts appropriated pursuant to the authorization of appropriations in section 2304(a)(5)(A), the Secretary of the Air Force may improve existing military family housing units in an amount not to exceed \$174.046,000.

February 2000

#### SEC. 2304. AUTHORIZATION OF APPROPRIATIONS, AIR FORCE

- (a) IN GENERAL
  - (5) for Military Family Housing functions -
    - (A) For construction and acquisition, planning and design, and improvement of military family housing and facilities, \$223,483,000.
    - (B) For support of military family housing (including functions described in section 2833 of Title 10, United States Code), \$826,271,000.

#### FY 2001 Appropriation Language

For expenses of family housing for the Air Force for construction, including acquisition, replacement, addition, expansion, extension and alteration and for operations and maintenance, including debt payment, leasing, minor construction, and insurance premiums, as authorized by law as follows: for [FY00] FY01 Construction, [\$347.649.000) \$223.483.000, for Operation and Maintenance, and Debt Payment[\$814.160,000] \$826.271.000; in all [\$1.161.809,000] \$1.049.754,000; Provided: That the amount for construction shall remain available until September 30, [2005] 2006.

February 2000

# **NEW CONSTRUCTION**

# DEPARTMENT OF THE AIR FORCE MILITARY FAMILY HOUSING FISCAL YEAR 2001 BUDGET REQUEST

# FY 2001 NEW/CURRENT MISSION ACTIVITIES

In compliance with the Senate Appropriations Committee Report (100-380) on the FY 1989 Military Construction Appropriation Act, the Air Force has included the following exhibit that displays construction projects requested in two separate categories: new mission and current mission. "New Mission" projects are projects that support deployment and beddown of new weapon systems. new program initiatives, and major mission expansions. "Current Mission" projects are projects that either replace inadequate existing facilities or construct new facilities which are not available to meet current requirements.

LOCATION	MISSION	NUMBER OF <u>UNITS</u>	REQUESTED AUTHORIZATION AMOUNT (\$000)

# **FY 2001 NEW CONSTRUCTION**

Program (In Thousands)
FY 2001 Program \$ 36,677
FY 2000 Program \$201.938

# Purpose and Scope

This program provides for the construction of new homes where the local community cannot provide adequate housing and replacement of existing homes, where improvements for Air Force personnel are not economically feasible, and support facilities where existing facilities are inadequate. Costs reflect all amounts necessary to provide complete and usable facilities.

# Program Summary

Authorization is requested for: construction of 2 units and replacement of 270 units.

A summary of the funding program for FY 2001 is as follows:

AUTHORIZATION  Type/Locations	Mission	Number of <u>Units</u>	Requested Amount (\$000)
Replacement Housing			
Bolling AFB DC Cavalier AFS ND Minot AFB ND	Current Current Current	136 2 134	\$ 17.137 443 19,097

10. Description of Proposed Construction: Demolish 136 family housing units and construct new. Provide necessary site preparation and upgrades to existing infrastructure. Provide new street layout in accordance with Housing Cmmunity Plan (HCP) site development. Provide interior fixtures, finishes and utility systems. new construction must provide accessibility for physically challenged persons. Provide recreation and landscaping.

11. REQUIREMENT: 6,839 UN ADEQUATE: 5,261 UN SUBSTANDARD: 1,172 UN PROJECT: Military Family Housing (Current Mission)

REQUIREMENT: This project is required to bring Bolling AFB housing units up to Air Force and minimum and contemporary living standards, eliminate health and safety hazards and improve energy efficiency.

CURRENT SITUATION: Housing units included in this project were constructed in 1975 under a very strict and low budget. There have not been any interior upgrades since the original construction. Previous economic analyses performed on units constructed in this era has proven to be more cost effective to replace than to renovate. Major problems exist as floor drains were placed in a closet adjacent to the living room under the original construction. The drains require constant maintenance to prevent sewer gas from forming in the units. The original floor tiles are in a

state of disrepair. Occupants are also living with insufficient lighting and power in addition to defective lighting equipment. The stairwell openings were constructed below current national standard. Occupants have difficulty to move furnitures into the second floor. Air conditioning units are at the end of their lifespan.

IMPACT IF NOT PROVIDED: Failure to improve the quality of life at this installation, impacts morale and therefore the mission. Government needs to provide housing comparable to civilian communities. This is essential to attract new recruits and retain existing forces.

ADDITIONAL: An economic analysis has been prepared comparing the alternatives of new construction, revitalization, leasing and status quo operation. Based on the net present values and benefits of the respective alternatives, new construction was found to be the most cost efficient over the life of the project. Base Civil Engineer: Col E. D. Mayfield, (202) 767-5565

				2	334,856

REQUIREMENT: 20 UN ADEQUATE: 5 UN SUBSTANDARD: 12 UN PROJECT: Construct Military Family Housing. (Current Mission) REQUIREMENT: This project is required to provide modern and efficient housing for military members and their dependents stationed at Cavalier AS. All units will meet modern standards. The housing will provide a safe, comfortable and appealing living environment comparable to the off-base civilian community. The design will provide a modern kitchen, living room, family room, bedroom and bath configuration, with ample interior and exterior storage. Four bedroom units will be constructed, as identified in the most recent housing market analysis. Units will be provided with a single car garage and exterior parking for a second vehicle. Space will also be provided for adequate support infrastructure of roads and utilities. The base currently has 12 housing units versus a validated requirement for 20. This is the only phase planned for new construction. The 12 substandard units will be improved under a FY01

improvement project.

CURRENT SITUATION: The most recent housing market analysis for the base shows a deficit of 3 housing units over and above adequate affordable housing available in the rural local community. The shortage of suitable housing forces military families to occupy inadequate housing units thus affecting family morale, or forcing members to occupy housing at rents outside the acceptable, causing unacceptable financial hardships as other portions of limited budgets are used to offset high housing costs. IMPACT IF NOT PROVIDED: There are no alternatives to living in inadequate or expensive housing if families desire to avoid lengthy and costly (both financially and psychologically) "voluntary" separations. The impact will be major morale and/or financial problems for the affected families. The local rural community can not support the base population. Members would be required to rent old, energy inefficient farm houses that result in the member paying unreasonable amounts of out-of-pocket expenses to heat the units during the harsh winter climate in the rural, northern tier environment.

ADDITIONAL: This project meets the criteria/scope specified in Part II of the Military Handbook 1190, "Facility Planning and Design Guide." There will be no impact on the local school district to support base dependents. Base Civil Engineer: Mr. Mark Blake, (701) 993-3331.

11. REQUIREMENT: 2,747 UN ADEQUATE: 812 UN SUBSTANDARD: 1,960 UN PROJECT: Replace Military Family Housing (Ph 7). (Current Mission) REQUIREMENT: This project is required to provide modern and efficient housing for military members and their dependants stationed at Minot AFB. All units will be "whole house" improved to provide a safe, comfortable and appealing living environment comparable to off-base civilian community. This project is programmed in accordance with the Housing Community Plan. This is the seventh of multiple phases to improve 2,445 housing untis for base personnel. 244 units have already been upgraded. The replacement housing will provide a modern kitchen, living room and bath configuration with ample interior and exterior storage plus an additional 28 NSM artic recreation room for harsh climates. Parking will be provided for a second vehicle. The neighborhood support infrastructure

REPLACE MILITARY FAMILY HOUSING (PH 7)

QJVF019001

|will be upgraded to meet modern housing needs to include landscaping, |playgrounds and recreation areas.

CURRENT SITUATION: This project replaces appropriated housing units built in 1964, which are showing the effects of age and continuous heavy use. They have had no major upgrades since construction, do not meet the needs of today's families, nor do they provide a modern home environment. Kitchens are too narrow and dark, and do not provide adequate cabinet and counter space. The bathrooms are very small and in poor condition. Bathroom fixtures are outdated and inefficient. Lighting in hallways, !bathrooms, and bedrooms is indequate. The exteriors of these units lack landscaping and have no patio. Off street parking is severly limited, and traffic flow in and around the housing area is inefficient. | IMPACT IF NOT PROVIDED: Air Force members and their families will continue to live in extremely outdated, unsuitable and unsatisfactory housing. The housing will continue to detriorate, resulting in increasing and unacceptable maintenance costs, and extreme inconvenience to the occupants. Without this and subsequent phases of this initiative, repairs to these units will continue at a costly, piecemeal fashion, with little or no improvement in living quality. Low morale can be expected if such conditions are permitted to continue. ADDITIONAL: This project meets the criteria/scope specified in Part II of

ADDITIONAL: This project meets the criteria/scope specified in Part II of the Military HAndbook 1190, "Facility PLanning and Design Guide". Since this is replacement housing, there will be no increase in the student population or impact on the local school district to support base dependents. Base Civil Engineer: Lt Col Wright, (701) 723-2434.

# DEPARTMENT OF THE AIR FORCE MILITARY FAMILY HOUSING FISCAL YEAR 2001 BUDGET REQUEST

### **FY 2001 POST ACQUISITION CONSTRUCTION**

Program (In Thousands)
FY 2001 Program \$ 174,046
FY 2000 Program \$ 128,630

# Purpose and Scope

The Air Force operates approximately 106,000 family housing units for FY 2000. The average age of housing units in the Air Force inventory is over 36 years. Based on recent analysis incorporated into the Air Force Family Housing Master Plan (AF FHMP), approximately 65,000 of these units now require improvement or renovation to meet contemporary living standards during the next decade. Under existing agreements, it is expected the host nations will revitalize 3,000 units leaving 62,000 units for the Air Force to revitalize. Many of these units require major expenditures to repair or replace deteriorated mechanical, electrical, or structural components, and to provide some of the modern amenities found in comparable community housing. The Post Acquisition Construction Program provides this needed revitalization. Each project also includes a significant amount of concurrent maintenance and repair to maximize the project cost effectiveness (average per project is 60%).

The Air Force is the acknowledged DoD leader in developing the "whole house" revitalization concept. Whole house is the combination of needed maintenance and repair together with improvements to bring the unit to contemporary standards. In addition, we are looking beyond the house to the entire housing area in our requirements plan. Our "whole neighborhood" concept is being developed and includes the development of neighborhood vehicular and pedestrian circulation concepts to consider siting, density, landscaping, parking, playgrounds, recreation areas and utilities, in addition to the housing unit itself.

Based on the expectation Congress will extend the authorities for privatizing military family housing beyond February 2001, six projects are identified as privatization candidates in this submission (Little Rock AFB, AR; Vandenberg AFB, CA; Moody AFB, GA; Offutt AFB, NE; Charleston AFB, SC; and Hill AFB, UT). In the event Congress does not extend the

February 2000 Page No. 299

# DEPARTMENT OF THE AIR FORCE MILITARY FAMILY HOUSING FISCAL YEAR 2001 BUDGET REQUEST

privatization legislation or privatization proves not to be financial feasible or not in the best interest of the Air Force, the Air Force will instead execute an improvement project at such installations as follows:

Little Rock AFB, AR (\$2.00M/35 units) Vandenberg AFB, CA (\$7.013M/45 units) Moody AFB, GA (\$8.401M/97 units) Offutt AFB, NE (\$14.982M/95 units) Charleston AFB, SC (\$2.00M/18 units) Hill AFB, UT (\$11.271M/100 units).

Consistent with Authorization and Appropriation Committees' language in FY 1990, the Air Force is seeking to maintain funding in this account to continue revitalizing our aging homes. Consistent with Appropriation Committees' language in FY 1985, the Air Force has gathered data on the post acquisition construction projects to detail past projects on these units and any future work being programmed within a three year period. This information is provided as a part of this submittal.

#### **Program Summary**

Authorization is requested for:

- (1) Various improvements to existing public quarters, as described on DD Form 1391.
  - (2) Appropriation of \$174,046,000 to fund projects in FY 2001.

NOTE: Projects within the program are within the statutory limitation of \$50,000 per unit adjusted by area cost factor, except as identified by separate DD Form 1391.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Includes all work necessary to revitalize military family housing by providing: air conditioning, where authorized: modern functional layouts; soundproofing; and utility and site improvements. Energy conservation actions include new and additional insulation, storm windows, solar screens, and efficient heating and cooling systems. Also includes "seed money" for the identified privatization candidate projects.

11 PROJECT: This request is for an authorization and appropriation of \$174.046 million to accomplish improvement

and privatization in family housing.

<u>REQUIREMENT</u>: To revitalize and improve the livability of older, obsolete family housing units, to conserve energy in these older housing units, and to bring utility systems up to current safety standards. Whole-house improvements include but are not limited to: kitchen upgrades, bathroom additions upgrades, repair replacement of roofs, upgrade of mechanical and electrical systems, replacement of windows, doors, floors, and exterior improvements (patios, fences, storages, etc.)

CURRENT SITUATION: The majority of these family housing units were constructed since the late 1940's or 1950's using various design and construction criteria, with different types of material, equipment, and appliances. Many utility and structural systems were constructed during years of plentiful, inexpensive energy resources. Insulation, storm windows and doors, etc., not previously cost effective, are now sound investment. This program will extend the useful life of many of our older, less modern units by enhancing livability, functionality, reducing operation costs and improving safety standards.

ADDITIONAL: These projects meet the criteria scope specified in Part II of Military Handbook 1190. "Facility Planning and Design Guide." Energy evaluation life-cycle cost analysis was performed in support of these projects.

POST AQUISITION CONSTRUCTION

IMPROVE MILITARY FAMILY HOUSING GKVB014003

10,923

- Provides general interior and exterior modernisation and renovation of housing units. Rewires the whole house and installs modern lighting. Upgrades the bathrooms. Retiles the roofs. Replaces all painted interior woodwork, doors and skirtings. Provides new floor coverings.
  - (Separate DD Form 1391 attached)
- WORK ACCOMPLISHED IN PREVIOUS THREE YEARS: In Fy 1998 the original windows and secondary double glazing was replaced in all 106 units. In FY 1999 the kitchens are being refitted in 94 units.
- WORK PROGRAMMED FOR NEXT THREE YEARS: None

#### RAF LAKENHEATH IMPROVE FAMILY HOUSING MSET014024

- Provides general interior and exterior modernization and renovation of housing units. Includes utility upgrade and additions to meet current standards. Upgrade kitchen, bathroom and floor coverings, improves floor plans, provides increased energy efficiency, privacy fencing, patios, playgrounds and recreation areas. Includes demolition and abestos/lead based paint removal.
  - (Separate DD Form 1391 attached)
- WORK ACCOMPLISHED IN PREVIOUS THREE YEARS: FY 98 Repairs to heating on 21 units.
- WORK PROGRAMMED FOR NEXT THREE YEARS: None

Description of Proposed Construction: Conveys 672 existing units, demolishes 166 units, replaces 334 units, and adds 172 units as income to the project for an end status of 506 units on approximately 250 acres of leased land. Without privatization, the MILCON cost for this work is |\$48.9M for an anticipated leverage of 9.7:1. Units will provide modern conveniences, inlcude amenities, support facilities and infrastructure. 11. REQUIREMENT: 1,691 UN ADEQUATE: 1,180 UN SUBSTANDARD: 840 UN PROJECT: Privatize Military Family Housing (East Housing), (Current Mission). REQUIREMENT: This project is required to provide access to modern, efficient safe housing for military members and their dependents stationed Vandenberg AFB. After conveyance, 334 units must be replaced to meet current codes and to provide a comfortable and appealing living environment comparable to off-base civilian community. After completion, (all units will meet "whole house" standards and are programmed in accordance with the Housing Community Plan, phases 9 to 14. CURRENT SITUATION: Units are over 38 years old and have deteriorated to the point where replacement is the most economical alternative. Wiring and fixtures have been identified by the Fire Department and Base Safety as a fire hazard; wiring is brittle and exposed. There are no ground fault interrupters (a life safety hazard). Fixtures are energy inefficient. Plumbing systems have succumbed to the effects of hard water and corrosion, resulting in severe flow constriction and pipe leakage. Overhead pipes in the attics leak, causing ceiling and property damage. |Corroded sewer lines leak in and under the floor slab. Roof structures are sagging. There is no family room and insufficient bulk storage.

Kitchens have inefficient work space/circulation, worn out/insufficient

10. Description of Proposed Construction: Improve 3 GOQs units. Alter kitchens, baths, bedrooms and sunrooms. Upgrade fixtures, finishes, wood floors, doors, moulding and trim. Replace plaster ceilings with gypsum board and repair plaster walls. Upgrade utility systems. Install shelves/util. sink in laundry room. Repair garages, patios, exterior appurtenances & landscape. Also improve exterior appurtenances for 19 GOQ Grade Mix: 22 O3-O10.

11. REQUIREMENT: 6,839 UM ADEQUATE: 4,836 UM SUBSTANDARD: 1,172 UM PROJECT: Improve 3 GOQ units to meet wholehouse standards. Also improve exterior appurtenances on 19 GOQ units. (Current Mission)
REQUIREMENT: This project is required to modernize 3 GOQ units to bring them up to current Air Force and Contemporary living standards and alter

them up to current Air Force and Contemporary living standards and alter exterior appurtenances on 19 GOQ units to make them livable. The exterior appurtenances include breezeway enclosures, gates, fences, patio covers and expansion. This project is also required to provide necessary repairs and improve energy efficiency.

CURRENT SITUATION: The 66 year old GOQ units do not meet current Air Force and contemporary living standards. The current layouts are obsolete and not functional. All major systems are from the original construction. The plaster wall and ceiling systems are failing, with plaster separating from the lath in many of the units. On several occasions, the ceilings have fallen. They are currently being jacked and secured on an as needed basis. The electrical and mechanical systems are of the original construction. Both systems have been modified through the years to meet the needs of the occupants. The minor modifications to the systems has left them in an incongruous state. The second floor areas require

10. Description of Proposed Construction	: Conve	ys 303 exi	sting and	đ

10. Description of Proposed Construction: Conveys 303 existing and provides deficit reduction of 393 single and multiplex family housing units for a privatization end state of 696 units on approx 100 acres of leased land. Without privatization, the MILCON cost for this work is \$45.9M for an anticipated leverage of 7.1:1. Privatized units will provide modern interior and exterior conveniences and required space.

11. REQUIREMENT: 2,369 EA ADEQUATE: 1,878 EA SUBSTANDARD: 98 EA PROJECT: HOUSING PRIVATIZATION, MOODY AFB, GA (Current Mission)

REQUIREMENT: This project is required to provide access to modern and efficient housing for military members and their dependents at Moody AFB.

396 new units must be constructed to provide modern and efficient housing for military members and their dependents stationed at Moody AFB. After completion, all units will meet "whole house" standards and are programmed in accordance with the Housing Community Plan. Privatized units will provide modern interior and exterior conveniences, be energy efficient, meet current space and floor plan standards, have modern kitchens, bathrooms and floor coverings. Includes all necessary amenities and supporting facilities to include site prepration, attached single car garages, air conditioning, energy conserving solar features, parking, exterior patios, support infrastructure of roads and utilities, neighborhood playgrounds, and all landscaping.

CURRENT SITUATION: The current MFH units were constructed in 1965/1972. These houses require major renovation and repair to correct deterioration resulting from heavy use. All do not meet the requirements of the whole house concept or the needs of today's families, nor do they provide a modern home environment. Kitchen and bathroom cabinets and fixtures are obsolete and deteriorated. Counter tops are warped, stained, and

separating at the seams. Plumbing and lighting fixtures are dated and deteriorated. The electrical systems do not meet modern codes. Ground Fault Circuit Interrupter protection is not provided for all bathrooms, kitchens, and exterior circuits. Window, siding, and installation require replacement. The shortage of suitable housing forces many military to accept inadequate housing in the local community, thus affecting family moral, or forcing members to occupy housing at rents outside the lacceptable range, causing financial hardships. The waiting times for base housing average 2-3 years.

IMPACT IF NOT PROVIDED: Units will continue to deteriorate rapidly, resulting in increasing operations, maintenance and repair costs to the Government and incovenience to residents. Without this project repairs of these units will continue in a costly, piecemeal fashion with little or no improvement in living quality. These are no alternatives to living in inadequate or expensive housing if families desire to avoid lengthy and costly (both financially and psychologically) "voluntary" sparations. impact will be major moral and/or financial problems for the affected families.

| 10. Description of Proposed Construction: Conveys 1116 existing family | housing units for a privatization end status of 1116 units on | approximately 301 acres of leased land. The MILCON cost for this work is | \$62.0M for an anticipated leverage of 6.6:1. Privatized units will | provide modern interior/exterior conveniences, include amenities, support | facilities and infrastructure.

11. REQUIREMENT: 3,062 UN ADEQUATE: 2,350 UN SUBSTANDARD: 712 UN PROJECT: Privatize Military Family Housing. (Current Mission)

REQUIREMENT: This project is required to provide access to modern and efficient housing for military members and their dependents stationed at Hill AFB. 688 units must be upgraded or replaced to meet current life safety codes and to provide a comfortable and appealing living environment comparable to the off-base civilian community.

CURRENT SITUATION: Housing units were constructed in 1963 and 1976. These 36 and 23 year old houses require major renovation and repair to correct deterioration resulting from age and heavy use. Few have had major upgrades since construction, and do not meet needs of today's families, nor do they provide a modern home improvement. Kitchen and bathroom cabintry is obsolete and deteriorated. Plumbing and electrical is deteriorated and does not meet current construction codes. Flooring is stained, worn and many areas contain asbestos. Windows, siding, and roofs require replacement. The units have inadequate living space and storage, and no patio or backyard privacy.

IMPACT IF NOT PROVIDED: Units will continue to deteriorate, resulting in increasing operating, maintenance, and repair costs to the Government and inconvenience to residents. Repair of these units will continue in a costly, piecemeal fashion with little or no improvement in living quality.

10. Description of Proposed Construction: Provides general interior and exterior modernization of 8 housing units in Areas A and B. Includes upgrades to kitchens, bathrooms, finishes (interior and exterior), and |floor coverings. Improve floor plans, energy efficiency, detached garages, landscaping, and provides limited additions and all other related work. Includes asbestos abatement and lead paint removal. Grade Mix: 8 03-010.

11. REQUIREMENT: 3,062 UN ADEQUATE: 2,350 UN SUBSTANDARD: PROJECT: Improve Military Family Housing. This project is for Officers Quarters; 2-3BR CGO, 2-3BR FGO, 3-3BR SGO, and 1-3BR GOQ. (Current Mission)

REQUIREMENT: This project is required to provide modern and efficient housing for military members and their dependents stationed at Hill AFB. The housing must be upgraded to meet current life safety codes and to provide a comfortable and appealing living environment comparable to the off-base civilian community. This is Phase I of multiple phases to improve 25 houses. All units will meet "wholehouse" standards and are programmed in accordance with the Housing Community Plan. Renovated housing will provid a modern kitchen, living room, bedroom and bath configuration with ample interior/exterior storage. Neighborhood improvements are required and will include landscaping, playgrounds and recreation areas.

| CURRENT SITUATION: Family housing units in Areas A and B are nonseverable for privatization and are being retained for officer housing. These units were originally constructed in 1939 and 1941 and have had only piecemeal jimprovements and repairs since. These units are historic structures and

KRSM014006

are on the approved historic preservation plan (cultural resource management plan). All repairs and improvements must meet the historic preservation statutes. In accordance with the Defense Planning Guidance these units must be revitalized before Fiscal Year 2010. The Air Force Condition Assessment Matrices, prepared in 1999, identifies nearly every building system in these units as substandard. In many of these units major renovation is required to correct these deficiencies. Further, the Housing Community Plan recommends additions to several of the units to provide accommodation for family room or master bathroom. It also recommends provision for additional interior and exterior storage.

IMPACT IF NOT PROVIDED: Units will continue to deteriorate, resulting in increasing operations, maintenance and repair costs to the Government and inconvience to residents. Without this project repair of these units will continue in a costly piecemeal fashion with little or no improvement in living quality.

| WORK ACCOMPLISHED IN PREVIOUS THREE YEARS: FY98 - Replace Windows, MFH | A/B, 11 units, \$153,103; FY99 - Install Gas Fire Places, MFH A/B, 9 units | \$36,69; FY99/00 - Repair Fence at 1106, MFH A, 1 unit, \$15,000 | WORK PROGRAMMED FOR NEXT THREE YEARS: None

ADDITIONAL: An economic analysis has been prepared comparing the lalternatives of new construction, improvement, and status quo operation. Based on the net present value and benefits of the respective lalternatives, improvement was found to be the most cost effective over the life of the project. The cost to improve this housing is 64% of the replacement cost. Base Civil Engineer: Col Per Korslund (801)777-2299.

10. Description of Proposed Construction:	<u></u>	100 and 8	COO		

10. Description of Proposed Construction: In 2 GOQ and 8 SOQ units, remodel the master bedroom and bathrooms; replace all windows and doors with energy efficient models; implement force protection measures; replace boiler and chillers, along with associate HVAC equipment, ductwork, and piping in the units; replace underground fuel storage tank with above ground tank with containment, construct one-vehicle carports.

[Grade Mix: 10 03-010.

11. REQUIREMENT: 446 UN ADEQUATE: 94 UN SUBSTANDARD: 212 UN PROJECT: Whole house improvements to 10 military family housing units to include construction of carports and repairs to mechanical equipment. This project includes work on 2 General Officers Quarters. (CurrentMission) REQUIREMENT: This project is required to provide modern and efficient housing for military members and their dependents stationed at Osan AB. The housing must be upgraded to meet current life safety codes and to provide a comfortable and appealing living environment comparable to the off-base civilian community. All units will meet "wholehouse" standards. Renovated houses will provide modern kitchen, living room, bedroom and bath configuration, with ample interior/exterior storage. Living units will be expanded to meet current space authorizations. Covered parking will be provided where deficient.

CURRENT SITUATION: Existing senior officer quarters (SOQ) and general Officer quarters (GOQ) were constructed in 1977. All units have undergone various repair projects over the years, however, none meet overall quality of life standards. According to the General and Flag Officers' Quarters Plan (GFOQP) "the boilers and chillers are approaching the end of their service life and need to be replaced." Similarly, the GFOQP states "the

1. COMPONENT 2. DATE FY 2001 MILITARY CONSTRUCTION PROJECT DATA |AIR FORCE (computer generated) 3. INSTALLATION AND LOCATION OSAN AIR BASE, KOREA 4. PROJECT TITLE 5. PROJECT NUMBER IMPROVE FAMILY HOUSING PH 1 SMYU014001

air handling units are approaching the end of their service life and need |replacement." Interior modifications are required to make the kitchens, llaundry rooms and bedrooms more functional and comfortable. Water lines are deteriorating, significantly affecting the level of service inside the homes. All residents of these units are key and essential and must live on base. Based on Air Force Family Guide 4.7.1, dated December 1998, single carports are authorized.

IMPACT IF NOT PROVIDED: Without major improvements and repairs, the buildings will continue to deteriorate. If the conditions are allowed to persist, the livability of the units will degrade and adversely affect the familys' quality of life. For force protection and readiness reasons, suitable off-base housing, even if it were available, is not an option for the key and essential senior and general officers who occupy these units WORK ACCOMPLISHED IN PREVIOUS THREE YEARS: None.

WORK PROGRAMMED FOR NEXT THREE YEARS: None.

ADDITIONAL: This project is sited within the boundaries of Osan AB which |will be retained by United States Forces Korea for the foreseeable future. Alternate methods of meeting this requirement have been explored during |project development. This project meets the criteria/space specified in Air Force Handbook 32-1084, Facility Requirements. An economic analysis |will be prepared comparing the alternatives of new construction, acquisition, and status quo. This project has been coordinated with the installation security plan and all required physical security measures have been taken into account. The cost to improve these units is 46% of replacement cost. This project is not eligible for Host Nation Funding through USFK. SIOH is based on Army Corps of Engineers. BCE:Lt Col Otis |Hicks (82-333-661-4312)

| 10. Description of Proposed Construction: Provides general interior and lexterior modernisation and renovation of housing units. Rewires the whole house and installs modern lighting. Upgrades the bathrooms. Retiles the roofs. Replaces all painted interior woodwork, doors and skirtings. | Provides new floor coverings.

|Grade Mix: 1 01-02; 13 03-010; 23 E1-E4; 69 E5-E9.

| 11. REQUIREMENT: 148 UN ADEQUATE: 42 UN SUBSTANDARD: 106 UN | PROJECT: Improve Military Family Housing

REQUIREMENT: This project is required to provide modern and efficient housing for military members and their dependents stationed at RAF Fairford. The housing has to be upgraded to meet current life safety codes and to provide a comfortable and appealing living environment. Additional interior and exterior storage space is needed and extra garages and off street parking areas are also required.

CURRENT SITUATION: These houses were built in 1959 and 1960 and are now in urgent need of major renovation and repair to correct deterioration resulting from age and heavy use. They have had no major upgrades since construction, do not meet the needs of today's families and do not provide a modern home environment. The roof linings have disintegrated and the facia and soffit boards have rotted allowing birds and vermin to enter the roof space. Bathroom cabinets and fixtures are obsolete and deteriorated. Showers are not thermostatically controlled and temperature fluctuations are frequently experienced due to the poorly designed plumbing systems. The electrical wiring does not meed current regulations and the lighting fixtures are old and are not efficient. Flooring is vinyl in the living rooms and wood in the bedrooms. The wood floors are hard to maintain and

[clean and look bad and vinyl is not a suitable flooring for the lounge. The units are smaller than the size currently authorized, are short of storage space. There are only 35 garages for 106 houses. IMPACT IF NOT PROVIDED: Units will continue to deteriorate. More frequent and more costly maintenance and repair will be necessary resulting in more inconvenience to residents. Low morale and retention problems can be expected if such conditions continue to exist. The desire to live off-base, at increased cost to the government, will increase. New occupants will continue to go on a waiting list for a garage. WORK ACCOMPLISHED IN PREVIOUS THREE YEARS: In Fy 1998 the original windows and secondary double glazing was replaced in all 106 units. In FY 1999 the kitchens are being refitted in 94 units. WORK PROGRAMMED FOR NEXT THREE YEARS: None ADDITIONAL: An economic analysis has been prepared comparing the alternatives of new construction, leasing, and status quo operation. Based on the net present values and benefits of the respective alternatives, improvement was found to be the most cost efficient over the life of the project. The cost to improve this housing is 48% of the replacement cost. This project is not eligible for NATO funding. BASE CIVIL ENGINEER: Capt Joseph Wedding, 011-44-1285-714229/4478 DSN:247-4229/4478

Bathroom cabinets and fixtures are obsolete and deteriorated. Plumbing and lighting fixtures are deteriorated and dated The roofs have deteriorated and are in need of repair. The electrical systems do not meet modern construction codes. Flooring is stained, loose and mismatched due to the non-availability of original materials for replacement. The units have inadequate living space by Air Force standards, only one full sized bathroom, minimal storage space, and no patio or backyard privacy. Landscaping, lighting, parking and recreation areas for housing residents are deficient.

IMPACT IF NOT PROVIDED: Units will continue to deteriorate rapidly, resulting in increasing operations, maintenance and repair costs to the Government and inconvenience of residents. Repair of these units will continue in a costly, piecemeal fashion with little or no improvement in living quality. Low morale and retention problems can be expected if such conditions continue to exist.

WORK ACCOMPLISHED IN PREVIOUS THREE YEARS: FY 98 Repairs to heating on 21 units.

WORK PROGRAMMED FOR NEXT THREE YEARS: None

ADDITIONAL: An economical analysis has been prepared comparing the alternatives of new construction, improvement, and status quo operation. Based on the net present values and the benefits of the respective alternatives, improvement was found to be the most cost effective over the life of the project. The cost to improve housing is 60% of the replacement cost as computed in Tri-Service Cost Estimate. Base Civil Engineer: Lt Col Andrew Scrafford,011-44-1638-522100 DSN: 226-2100.

## DEPARTMENT OF THE AIR FORCE MILITARY FAMILY HOUSING FISCAL YEAR 2001 BUDGET REQUEST

## FY 2001 ADVANCE PLANNING AND DESIGN

Program (In Thousands)
FY 2001 Program \$12,760
FY 2000 Program \$17,081

### Purpose and Scope

This program provides for preliminary studies to develop additional family housing facilities, one time multi-phase design, and housing community plan developments; studies for site adaptation and determination of type and design of units; and working drawings, specifications, estimates, project planning reports and final design drawings of family housing construction projects. This includes the use of architectural and engineering services in connection with any family housing new or post acquisition construction program.

## **Program Summary**

Authorization is requested for:

- (1) Advance planning and design for future year housing programs;
- (2) FY 2001 appropriation of \$12.760,000 to fund this effort as outlined in the following exhibit:

February 2000

- 10. DESCRIPTION OF PROPOSED CONSTRUCTION: Architect-engineer services, survey, fees, etc., in connection with advance planning and design of family housing dwelling units and properties included in or proposed for the Air Force Family Housing Construction Account.
- 11. <u>PROJECT</u>: This request is for an authorization and appropriation of \$12.760 million to provide planning and design costs in connection of family housing new or post acquisition construction programs.

REQUIREMENT: The funds requested are necessary to procure architect-engineer services to make site and utility investigations: one time multi-phase design, and housing community plan (HCP) developments; for the preparation of design and specifications of advance plans for future year family housing programs in connection with any family housing new or post acquisition construction programs.

<u>IMPACT IF NOT PROVIDED</u>: The funds requested are necessary to support the development of the housing community plans and to support the new and post acquisition construction programs.

## **O&M SUMMARY**

## OPERATIONS, UTILITIES AND MAINTENANCE (Excluding Leasing and Debt)

Program (\$ in Thousands) FY 2001 Program \$711,609 FY 2000 Program \$695,618

<u>Purpose and Scope:</u> Provides operations and maintenance resources to pay for the cost of ownership in terms of property management, utilities, and day-to-day maintenance.

- a. <u>Operations</u>. This portion of the program provides for operating expenses in the following sub-accounts:
- (1) Management. Includes installation-level management such as housing office operations, quality assurance evaluators, administrative support, community liaison, and annual service fees paid to the Corporation-Trust Company. Provides the required corporate presence in Delaware for the United States Air Force Housing, Inc., which continues as the entity holding title to Capehart and Wherry real property. The housing referral program assists the 60% of Air Force families that live in local communities to find quarters in the private sector and implements the Fair Housing Act of 1968. Housing Management offices provide counseling on housing decision-making, advance information on new base of assignment, and assist members through settling-in and home-finding.
- (2) Services. Provides basic support services including refuse collection and disposal; fire and police protection; entomology and pest control; and snow removal and street cleaning.
- (3) Furnishings. Procures household equipment (primarily stoves and refrigerators) and, in limited circumstances, furniture; controls furnishings inventories; and maintains and repairs furniture and appliances.
- (4) Miscellaneous. Provides mobile home hookups, leased office and warehouse space supporting family housing, and payments to other federal agencies or foreign governments to operate permit housing units occupied by Air Force personnel.
- b. <u>Utilities</u>. Includes all purchased and base-produced heat, electricity, water, sewer, and gas utilities serving family housing. Occupants purchase their own telephone and cable TV service.
  - c. Maintenance. Provides upkeep of family housing real property, as follows:

February 2000

- (1) Maintenance/Repair of Dwellings. Service calls, routine maintenance, repairs, and replacement of deteriorated facility components.
- (2) Exterior Utilities. Maintenance and repair of water, sewer, electric, steam and gas lines supporting family housing areas.
- (3) Other Real Property. Upkeep of grounds, common areas, roads, parking areas, and other property for the exclusive use of family housing occupants not discussed above.
- (4) Alterations and Additions. Minor alterations to housing units or housing support facilities. Large scope and high dollar-value projects are included in the construction program.

The Air Force family housing budget requests essential resources to provide military families with housing either in the private market through assistance from a housing referral office, or in government housing. Increased emphasis has been placed on the proper funding of the family housing operations and maintenance program. The Air Force's FY01 Operation and Maintenance programs emphasize the following goals:

- \* Identify affordable housing for military members. Where shortages exist, identify project proposals to privatize or request new construction or leasing of housing for military families.
- \* Reduce utility consumption through increased management emphasis on energy conservation and whole-house improvements to improve energy efficiency.
- \* Reduce furnishings inventories in accordance with transfers and realignments. Redistribute excess furnishings from realigned bases.
- \* Fund government appliances and furniture consistent with cost/benefit studies and the delivery of new housing units which need government-supplied appliances.
- \* Continue the Quarters Cleaning Initiative (QCI) which helps limit expensive overseas temporary lodging allowances (TLAs) to approximately three days in lieu of the 10-day maximum. QCI program costs are offset by known savings in TLA accounts.
- \* Invest wisely in maintenance and repairs to preserve and restore the existing housing inventory worldwide.
- \* Schedule maintenance and repair activities along with whole-house improvements to obtain the greatest enhancement in livability while increasing the useful life of housing units with the minimum capital investment and minimum impact on occupants.

- \* Pursue privatization ventures to transfer operation and maintenance responsibility to the private sector where cost effective. Accelerated revitalization of housing assets is the biggest benefit from privatization.
- \* Continue efforts to decrease operations and maintenance costs in certain high-cost homes.
- \* Continue installation, operation, maintenance, and improvements of the Automated Civil Engineer System-Housing Module, (formerly identified as Housing Information Management System) an Air Force-wide computer system designed to assist in all phases of housing management. Ongoing initiatives include fielding of software needed to fulfill daily assignment, scheduling, maintenance, and inspection of units. Improved customer service and reduced operations costs are anticipated through the fielding of this system.

Operation and Maintenance FY 2001 Program Summary - Highlights
Authorization/Appropriation is requested in FY 2001 for \$711,609. This amount, together with estimated reimbursements of \$10,840, will fund the FY 2001 Operation and Maintenance program of \$722,449.

A summary of the funding program for FY 2001 is as follows (\$ in thousands):

Operations	Utility	Maintenance	Total Direct	Reimburse-	Total
Request	Request	Request	Request	ment	Program

REAL PROPERTY MAINTENANCE ACTIVITIES OPERATION AND MAINTENANCE COSTS			FY01	
of Electron And Maint English 60313		Exhibit:	FH-5	
Fiscal Year: Historic Housing Costs	1999	2000	2001	
A. Number of Units	1,052	1,052	1,043	
B. Improvements (\$000)	0	0	0	
C. Maintenance and Repair (\$000)	7,154	6,304	10,782	
Total Historic Maintenance, Repair, Improvements (\$000)	7,154	6,304	10,782	

For over 10 years the Air Force has applied a special effort to decrease operation and maintenance costs in high cost quarters. Aggressive management of the maintenance, repair, and improvements has allowed the Air Force to hold costs for historic housing near the cost for the average unit.

Increased Maintenance and Repair costs in FY01 are the result of restoration projects for historical units at several installations to include the repair of 9 units at Pope AFB, NC and 37 units at F.E.Warren AFB, WY.

(Program In Thousands) FY 2001 Program \$124,194 FY 2000 Program \$126,497

The FY 2001 program represents Air Force family housing requirements and was developed using OSD/OMB approved inflation and foreign currency fluctuation rates. Adjustments have been made for force structure changes and mission realignments. All program sub-accounts are described in detail in the following analyses:

Management. The Management account includes installation-level housing office operations, quality assurance, administrative support, community liaison, and annual service fees paid to the Corporate-Trust Company to provide the required corporate presence in Delaware. The housing referral program assists members to find homes in the private sector and implements the Fair Housing Act of 1968.

14.	FY 2001 Budget Request:	\$55,685

#### Analysis of Change in Management

The Management sub-account consists of predominately fixed costs such as salaries and required administrative support supplies and equipment. As part of our management activity, we are completing development of new computer-based work tools to improve customer service and management of resources. This effort includes implementation of the Automated Civil Engineer System-Housing Module. This system improves customer services and data sharing for overall program management and also provides interactive training.

As part of the continuing effort to develop alternatives for more cost-effective activities, the Management sub-account provides funds for studies of privatization projects at selected installations. The management sub-account also provides funds for Housing Market Analyses at each base to determine the proper amount of housing needed to support the assigned population, and supports the Family Housing Master Plan, which is the source document for future housing decisions.

As civil engineer services are competitively sourced, we anticipate small decreases in management and referral service costs.

The Management sub-account is not per-unit specific since there is a basic level of support and manning for the base housing office regardless of the number of units.

February 2000

<u>Services</u>. Provides basic support services such as refuse collection and disposal; fire and police protection; entomology and pest control; snow removal; and street cleaning.

Military family housing activities are affected by many new environmental standards. The environmental legislative changes in states and foreign countries continue to evolve leading to an uncertain ability to predict program growth. Initiatives to remove lead-based paint and asbestos, and provide spill/overflow protection and corrosion control are also covered within this account.

#### Analysis of Changes in Services

The Services budget request has been increased for environmental program initatives such as lead-based paint and asbestos removal and corrosion controls efforts. Inventory decreases also drive decreases in the funds requested.

February 2000

<u>Furnishings</u>. Includes the procurement for initial issue and replacement of household equipment (primarily stoves and refrigerators) and in limited circumstances, furniture; the control, moving, and handling of furnishings inventories; and the maintenance and repair of such items.

This Fiscal Year 2001 Budget reflects the Congressional desire for increased burden sharing with foreign governments.

Loaner sets of furniture are issued to military families overseas so they may occupy permanent quarters prior to the arrival of personally owned furniture. Loaner sets are very cost effective because they reduce the cost of temporary quarters. Other items of household furnishings normally built into CONUS houses which are limited or not available in foreign countries, such as wardrobes (clothes closets), dish cabinets or sideboards and appliances, are also issued to military families.

Leases in Europe also require closets and dish cabinets to be issued along with appliances since leased units overseas do not have the same accommodations available as in the United States.

The furnishings account funds essential furnishings at levels consistent with cost/benefit studies and the needs of the Air Force. Much of the funding requested in the furnishings account results from an analysis of the most economical or cost effective way to fulfill Air Force requirements. Issue of furnishings by the government avoids higher costs in other accounts such as military allowances and other support appropriations.

9.	FY00 Current Estimate	\$38,665
10.	Price Growth:	
	a. Inflation	\$580
	b. Foreign Currency Fluctuation Rate Adjustment	-\$150
11.	Functional Program Transfer:	None
12.	Program Increase: Mission realignment and increased operations furnishings support in PACAF and USAFE	\$131
13.	Program Decreases:	
	Inventory decrease (2,947 units)	-\$1,046
14.	FY 2001 Budget Request:	\$38,180

#### Analysis of Changes in Furnishings

This request addresses the needs of newly constructed and leased housing units being added to the Air Force inventory to compensate for housing deficits. For example, mission requirements and realignments have resulted in the build-up of activities at several locations in Europe, to include increases in concurrent family travel at RAF Lakenheath, England. Funding is required to support initial issue requirements for the Lakenheath build-to-lease units coming on line in FY2001. With more families at these locations to support, the furnishings requirements have increased.

February 2000

Miscellaneous. Includes mobile home hookups, leased office and warehouse space supporting family housing, payments to other Federal agencies or foreign governments (i.e. United Kingdom and Australia) to operate Permit Housing units occupied by Air Force personnel, and similar costs.

(\$ in Thousands)

1.	FY 2000 President's Budget	\$2,640
2.	Congressional Adjustments:	None
3.	FY 2000 Appropriated Amount:	\$2,640
4.	Supplementals:	None
5.	Price Growth:	None
6.	Functional Program Transfers:	None
7.	Program Increases:	None
8.	Program Decreases: Greater than anticipated savings in country-to- country agreements in Australia	-\$275
9.	FY00 Current Estimate	\$2,365
10.	Price Growth:  a. Inflation  b. Foreign Currency Fluctuation Rate Adjustment	\$35 -\$3
11.	Functional Program Transfer:	None
12.	Program Increases:	None
13.	Program Decreases: Overall Air Force inventory decrease of 2,947 units	-\$65
14.	FY 2001 Budget Request:	\$2,332

#### Analysis of Changes in Miscellaneous

This stable program covers incidental costs in support of family housing. Costs of the host country agreement with Australia are decreasing as the requirement for homes supporting operations is reducing. In addition, miscellaneous costs include implementation of the International Cooperative Administrative Support Services (ICASS) Program. ICASS is a system for managing and sharing the administrative support costs of overseas operations of US Foreign Affairs agencies and other US Government agencies that operate as part of the country team at US Embassies.

# **UTILITIES**

#### **RECONCILIATION OF INCREASES AND DECREASES**

#### **EXHIBIT OP-5**

<u>Utilities.</u> This program provides for all utilities consumed in government-owned family housing. Electricity, purchased heating, water, sewage and waste systems are included. MFH facilities consume approximately one-fifth of Air Force facility energy usage; therefore, MFH residents and management share a significant role in the achievement of Air Force energy reduction goals. Since MFH occupants are not billed for their energy consumption, conservation motivation comes primarily from command emphasis. Energy projects to install set back thermostats, water heater jacket insulation, insulation in crawl and attic spaces, and thermal doors and windows are also achieving good results toward the attainment of Air Force energy conservation goals.

	b. Inventory decrease (2,947 units)	-\$4,355
14.	FY 2001 Budget Request:	\$158,959

#### Analysis of Changes in Utilities

The requirement for FY 2001 is based on historical obligation trends which continue to be influenced by energy conservation savings resulting from whole-house improvements and energy conservation projects. Privatization of utility service lines and activity will cause some localized increases in perunit costs. Yet, this downward cost trend is expected to continue as the Air Force strives to meet aggressive utility savings goals. In general, the continuing trend for utilities is cost growth below normal inflation as a result of on-going initiatives to conserve energy. Air Force goals continue to emphasize a reduction in energy consumption and costs through conversion to natural gas and installation of energy saving materials in housing units. For the majority of locations, utility rates are stable. Continued conservation efforts allow reduced consumption and costs. Also, inventory decreases contribute to decreases in the funds requested.

Projected Energy Consumption		Fiscal Year:	2001
Family Housing Summary of Utility D	etail		
		Exhibit:	FH-10
Fiscal Year:	1999	2000	2001
TOTAL COST OF UTILITIES (\$000) (Dollar amounts of program)	156,051	161,120	158,959
UTILITY QUANTITIES OF COMMODITIES			
Electricity (KwH)	604,187,807	599,008,709	587,531,539
Heating			
Gas (CF)	2,566,960,675	2,545,714,252	2,524,548,709
Fuel Oil	3,000	3,000	3,000
Residuals (BBLS)	5,100	4,975	4,851
Distillates (BBLS)	271,073	256,301	250,002
Purchased Steam (MBTU)	605,484	605,385	605,385
Heat Plants Coal Fired (MBTU)	701,838	640,675	673,421
Heat Plants Other Than Gas, Oil, Coal (MBTU)	0	0	0
Propane (BBLS)	1,049	1,085	1,074
Water (Kgal)	18,440,730	18,269,614	18,727,439
Sewage (Kgal)	13,329,489	13,103,135	13,118,155

The consumption stream shown in the table above is consistent with consumption and costs through conversion to natural gas and installation of energy-saving materials and equipment in housing units.

#### Analysis of Changes in Maintenance Program

The maintenance account reflects Air Force Family Housing Master Plan (AF FHMP) priorities and attempts to arrest growth of our deferred housing maintenance and repair requirements within fiscal constraints. Unfortunately we have not eliminated our deferred maintenance and repair backlog. In 1999 we projected 61,000 inadequate units. Yet, after two years of strong congressional support of military family housing programs, the recent analysis of Air Force housing accomplished by architectural and engineering firms during the AF FHMP data gathering process, indicates that due to deferring maintenance and repair, we have made little headway in reducing the number of inadequate units. As of FY2001, the AF FHMP projects the need to revitalize approximately 65,000 inadequate houses.

The AF FHMP draws a distinct line between military construction and maintenance funding. Architect and engineering firms have gathered housing condition assessment data on every housing type in the Air Force. This data documents the existing condition of major housing system components (ex: roofs, furnaces, carpets, windows, cabinets) and then, using industry standard life cycles, projects the replacement requirement for these components (ex: roof: 15-20 years; gas furnace: 20 years). The overall condition of housing components and replacement costs determine whether each requirement is projected for replacement using military construction or maintenance funding. This database is then used to project future facility funding requirements for both construction and maintenance funding.

Air Force assets are valued at over \$16.5 billion in replacement costs. Limited maintenance funding and a high occupant turnover have accelerated deterioration of the Air Force housing inventory. Many of the homes were built in the 1950s and 1960s and have never received system upgrades. Constrained funding has resulted in a greater reliance on more costly, temporary fixes which only exacerbate the deterioration of our housing units. Notably, the infrastructure systems such as streets and sewers that support the units are now beyond their projected economic lives at most installations, with several systems near failure.

Housing condition assessments conducted for the AF FHMP substantiate that a failure to adequately fund maintenance and repair eventually leads to increased military construction costs. The maintenance and repair funding profile represents a balanced, fiscally constrained program of available funds.

Installation commanders have expressed concern about family housing and its impact on personnel performing the mission on their installations. In a Quality of Life Survey, family housing received the highest ranked response at 73%, far outpacing the next highest concern, which was health care at 34%. Installation Commanders concern for family housing was so high that they placed family housing in their top three priorities for needing additional funding--above areas such as base facilities, recreation and services, income/cost of living adjustments, and even health care.

Consistent with DOD and Congressional concerns, the Air Force is actively pursuing means to reduce the deferred maintenance and repair (DMAR) backlog. The Air Force's goal is to reduce the end-of-year backlog to one year's normal recurring maintenance and repair of our dwellings to ensure availability of quarters that meet community standards. The method we use to measure our effectiveness against this standard is to track the impact of the funded program against DMAR. When funding is lower than maintenance requirements, asset deterioration accelerates. This current growth of maintenance costs is above inflation rates and increases the scope of future programmed work. Another impact from underfunded maintenance is an increase in the number of emergency repairs that are disruptive to occupants, costly, and manpower intensive. The backlog of unrepaired systems also generates other work (i.e., delayed roof projects require additional work to fix leaks, patch and paint ceilings, etc.). Current funding levels do not achieve the goal of reducing DMAR.

The Air Force has initiated a whole-house/whole-neighborhood concept to determine total funding required to bring existing facilities up to standards. This concept combines all improvements with required maintenance and repairs into one project, minimizing quarters downtime and disruption to residents due to piece-meal work. However, if whole-house renovations are delayed for too long, emergency projects to fix specific systems (e.g. roof leaks) must be accomplished in the interim, driving up life-cycle costs.

Quality family housing has a great impact on the lives of our members and the readiness of our forces. It is for this reason that we believe the maintenance dollars the Air Force has programmed into this budget will have a payback far greater than that which can be measured in terms of average unit costs. Future budget increases to this account can only improve the quality of life for our airmen and their families, which can produce positive leverage on retention and readiness.

## This Page Intentionally Left Blank

# MAINTENANCE & REPAIR OVER \$20K

## FAMILY HOUSING REPAIRS - NON GOQ UNITS (EXCEEDING \$20,000 MAJOR MAINTENANCE AND REPAIR THRESHOLD)

This information complies with Congressional direction that requires the Services to report major maintenance and repair expenditures projected to exceed \$20,000 per unit. While these projects are shown as line items here, the maintenance budget estimate includes them among overall requirements for the entire inventory. Since over 60 percent of the average investment project includes major maintenance and repair actions, we can mitigate some of these problems through the O&M program.

#### **NEBRASKA**

<u>Offutt</u>	19	1961	35	238	4,522	532	0

Narrative: Waterproofs basements and foundations, installs foundation drainage, regrades around dwelling, and repairs gutters and downspouts.

## FAMILY HOUSING REPAIRS - NON GOQ UNITS (EXCEEDING \$20,000 THRESHOLD)

<u>Location</u>	No <u>Units</u>	Year <u>Built</u>	High Unit Cost (\$000)	Unit (NSM)	Proj (NSM)	Total Cost (\$000)	Improvements Non-Routine FY1996-2000 (\$000)
NORTH CAROLINA							
Pope	8	1933	250	226	1,810	1,704	0

Narrative: NRHP registered units with no major restoration since 1933. Replaces the original utilities that are inefficient, well beyond their useful lives and do not meet current building codes. Replaces interior fixtures and finishes that are deteriorated and have multiple layers of peeling lead-based paints. Repairs kitchens, bathrooms, wall and floor coverings, windows, exterior walls, and increases HVAC efficiency.

#### <u>NORTH</u> DAKOTA

<u>Grand Forks</u> 30 1964 67 115 3,450 2,010 25

Narrative: Repairs to contemporary standards interiors, including heating, air conditioning, electric service, attic ventilation and insulation, basement drain tile, smoke detection. Relocates laundry rooms from basement and creates arctic recreation space in basement.

#### OHIO

<u>Wright-Patterson</u> 45 1970 20 105 4,725 900 0

Narrative: Repairs kitchens, including replacing kitchen cabinets, sinks, faucets, counter tops, range hoods, garbage disposals, light fixtures and flooring. Repairs bathrooms, including replacing vanities, sinks, faucets, light fixtures, medicine cabinets, exhaust fans, flooring, tub and shower enclosures. Paints kitchen and bath ceilings and walls.

<u>Wright-Patterson</u> 50 1970 22 104 5,200 1,100 0

Narrative: Repairs exteriors, including replacing siding, roofs, roof flashing, gutters, and downspouts. Replaces windows with new energy-efficient windows. Replaces exterior light fixtures, door bells, and range exterior hood vents. Repairs sidewalks, curbs, and steps. Replaces rear service doors, jambs, and locks on garages. Tuckpoint masonry. Constructs new gables and dormers, repair eaves, and construct new patio door covers.

### This Page Intentionally Left Blank

### GENERAL OFFICER QUARTERS (EXCEEDING \$25,000 THRESHOLD)

This information complies with the 1984 House Appropriations Committee language requiring the Services to report any expenditures from the maintenance account for General or Flag Officer housing projected to exceed \$25,000 per unit. The number of maintenance projects over this threshold has increased over previous years, which reflects a growing deterioration of the inventory and growing inflationary pressure on the threshold. This is primarily due to the growing number of units that are waiting for improvement and renovation with investment funding. Since over 60 percent of the average investment project includes major maintenance and repair actions, we can mitigate some of these problems through the O&M program. While these projects are shown as line items, the maintenance budget estimate includes these problems among overall requirements for the entire inventory.

As with the non-GOQ units exceeding the \$20,000 threshold, inflation plays a role in driving repair costs beyond the \$25,000 threshold. Eventually relatively routine repairs will exceed the specified thresholds if no upward adjustment to the threshold is made to account for inflation.

Each project described below includes maintenance and repair, alterations, asbestos and lead based paint abatement and operations costs anticipated for FY 2001 to present a complete picture of the spending projected for the quarters.

## REIMBURSABLE PROGRAM

### RECONCILIATION OF INCREASES AND DECREASES <u>Exhibit OP-5</u>

<u>Reimbursement.</u> Includes collections received from rental of Air Force family housing to foreign nationals, civilians and others. Included in the estimate are the anticipated reimbursements due to members who voluntarily separate that are authorized to live in government quarters for up to 6 months after separation.

The FY 2001 request includes a modest program adjustment and inflationary increase from FY 2000 program.

### This Page Intentionally Left Blank

## **LEASING**

### **LEASING**

<u>Program (\$ in Thousands)</u> FY 2001 Program \$114,628 FY 2000 Program \$118,509

### Purpose and Scope

Provides leasing of privately owned housing for assignment as government quarters at both domestic and foreign locations when the local economy and on-base housing cannot satisfy requirements. The leasing program is authorized by 10 U.S.C. 2828 and provides for payment of rent, operations, and maintenance costs of privately-owned quarters for assignment as government quarters to military families. This program also includes funds needed to pay for services such as utilities and refuse collection when these services are not part of the contract agreement.

The Air Force continues to rely on the private sector to meet the majority of housing needs. Where the private sector rental markets and on-base housing cannot meet requirements and cost-effective alternatives do not exist, short and long-term leases are used. The Air Force must use the leasing program in high cost areas and overseas to obtain adequate housing to meet critical needs.

#### Program Summary - Highlights

Authorization is requested for appropriation of \$114,628 to fund leases and related expenses in FY 2001. FY 2001 request for family housing leasing points is summarized as follows:

- (1) 9,201 Foreign lease points
- (2) 5,800 Section 801 lease points
- (3) 3,333 Domestic lease points

#### Foreign Leasing

Congress controls leasing in foreign countries: first by the number of lease points authorized, then by the review and approval of contract proposals, and finally by the funds appropriated. As overseas bases close, foreign leases are terminated as soon as economically possible. Air Force strategy during the remaining drawdown in overseas areas is to continue to maximize the use of government-controlled assets, thereby providing more affordable housing for our personnel and avoiding expensive off-base housing entitlements. The Air Force has been able to retain some housing areas from closing bases for use by families at remaining nearby bases. In fact, the percentage of Air Force members assigned to foreign locations who are able to reside in government-controlled quarters has increased. As the Air Force has drawn down in Europe, the order of the release of housing assets has been, where possible, (1) private rentals (which are usually

February 2000 Page No. 399

the most expensive), (2) Government Rental Housing Program (GRHP) and build-to-lease units, and (3) government owned. The exact mix of types of housing has depended upon available assets in each locality. Where possible the Air Force has made renewals of leases on a year-to-year basis to reduce costs by limiting termination liability. Full authorization is required to allow for sufficient flexibility during mission realignments to maximize cost effective solutions.

### Section 801 Leasing

This program is helping to reduce our CONUS family housing deficit at bases where Air Force families are seriously affected by housing shortages and high housing costs.

In FY 1984, Congress authorized the testing of a new leasing program for U.S. installations in P.L. 98-115, Section 801. Subsequently, nine housing communities were constructed:

Eielson AFB, AK, 300 units and 366 units
Hanscom AFB, MA, 163 units
Goodfellow AFB, TX, 200 units
March AFB, CA, 200 units (base closed in FY96)
Summerfield Housing, MD 1242 units (828 Air Force funded, 414 Navy funded)
Travis AFB, CA 300 units
Ellsworth AFB, SD, 200 units and 828 units
Hurlburt AFB, FL, 300 units
Cannon AFB, NM, 350 units

The Air Force contracted to have Centennial Estates Housing (828 units) constructed by Hunt Building Corporation (HBC) in 1990 and 1991 at Ellsworth AFB. Poor construction caused many units to become uninhabitable. A settlement agreement was signed by HBC on 1 Mar 99 and by the Air Force and Department of Justice on 2 Mar 99. HBC will pay the United States \$8M over a 5 year period. The settlement includes an allocation of funds to Ellsworth AFB for real property and facility maintenance which will be funded through the regular O&M appropriation verses the Military Family Housing O&M appropriation. The Air Force estimates Ellsworth AFB will receive \$485K in FY2001.

### **Domestic Leasing**

Domestic leasing provides temporary housing for Air Force families pending availability of permanent housing. For example, the Air Force is supporting OSD's requests for domestic lease units for personnel assigned to the Armed Forces Radio and Television Service in Los Angeles, CA, and for units supporting the Defense Finance and Accounting System reorganization. This has been an excellent transition procedure to support families in high cost areas while preparing for long-term solutions. Also, affordable housing in high cost locations for recruiters is giving vital support to recruiting.

HIGH COST DOMESTIC LEASE approvals range between \$12k and \$14k per year with OSD approved inflation added per year. Thirty eight of the Recruiter and ROTC leases exceed \$12K per year and details of each new or renewed lease is approved by Congress.

<sup>\*</sup> HIGH COST FOREIGN LEASE criteria differs from domestic. Adjusted cost cap for overseas leases is determined by multiplying \$20k times the FY 88 exchange rate divided by the FY 01 exchange rate. Leases exceeding this cap are defined as HIGH COST and are part of the number of high cost leases allowed.

<sup>\*\*</sup> STATE DEPARTMENT pool leases do not count against the total number of high cost leases allowed.

## **DEBT PAYMENTS**

#### **FY 2001 DEBT PAYMENT**

Program (in Thousands) FY 2001 Program \$34 FY 2000 Program \$33

### Purpose and Scope

The Debt Payment program continues in name only, as the last of the Capehart and Wherry mortgages were liquidated in FY 1989. This program includes payment of Servicemen's Mortgage Insurance Premiums to FHA for mortgages assumed by active military personnel prior to FY 1980.

### Program Summary - Highlights

Request authorization for the appropriation of \$34,000 for FY 2001. No additional budget authority is required for mortgages as noted above.

### Servicemen's Mortgage Insurance Premiums

Servicemen's Mortgage Insurance Premiums, Section 124, Public Law 560, 83rd Congress, The Housing Act of 1954, aids in providing homes for members of the Armed Forces of the United States and their families through a system of FHA mortgage insurance, specially designed to assist such members in financing the construction or purchase of homes.

This program was discontinued through Public Law 93-130 (Military Construction Appropriation Act, 1980) which allowed coverage only on existing mortgages covered prior to FY 1980. The amount needed to continue funding premiums on mortgages existing prior to FY 1980 continues to slowly decrease, adjusted for inflation. The program for FY 2001 is as follows:

Fiscal Year	<u>Number</u>	Average Payment/Yr	Amount (\$000)
2001	181	\$189	\$34
